STROBE Statement—checklist of items that should be included in reports of observational studies

Impact of anticipated awake surgery on psychooncological distress in brain tumour patients

Methods Study design 4 Present key elements of study design early in the paper 4-5 Setting 5 Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection 4-5 Participants 6 (a) Cohort study—Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up 4 Case-control study—Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls Cross-sectional study—Give the eligibility criteria, and the sources and methods of selection of participants (b) Cohort study—For matched studies, give matching criteria and number of exposed and unexposed n.a. Case-control study—For matched studies, give matching criteria and the number of controls per case		Item		Page	
(b) Provide in the abstract an informative and balanced summary of what was done and what was found		No.	Recommendation	No.	
Introduction Background/rationale 2 Explain the scientific background and rationale for the investigation being reported 3	Title and abstract	1	(a) Indicate the study's design with a commonly used term in the title or the abstract	1	
Background/rationale 2 Explain the scientific background and rationale for the investigation being reported 3 Objectives 3 State specific objectives, including any prespecified hypotheses 4 Methods Study design 4 Present key elements of study design early in the paper 4-5 Setting 5 Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection Participants 6 (a) Cohort study—Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up Case-control study—Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls Cross-sectional study—Give the eligibility criteria, and the sources and methods of selection of participants (b) Cohort study—For matched studies, give matching criteria and number of exposed and unexposed Case-control study—For matched studies, give matching criteria and the number of controls per case Variables 7 Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable Data sources/ 8* For each variable of interest, give sources of data and details of methods of assessment methods if there is more than one group			•	2	
Objectives 3 State specific objectives, including any prespecified hypotheses 4	Introduction

measurement (measurement). Describe comparability of assessment methods if there is more than one group	Variables	7		4-5	
		8*		n.a.	
		9		n.a.	

Study size	1	0 Explain how the study size was arrived at	4
	11		
Quantitative variables	11	Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why	1.
Statistical	12	(a) Describe all statistical methods, including those used to control for confounding	5
methods		(b) Describe any methods used to examine subgroups and interactions	5
		(c) Explain how missing data were addressed	4-5
		(d) Cohort study—If applicable, explain how loss to follow-up was addressed	4-5
		Case-control study—If applicable, explain how matching of cases and controls was addressed	
		Cross-sectional study—If applicable, describe analytical methods taking account of sampling	
		strategy	
		(\underline{e}) Describe any sensitivity analyses	
Results			
Participants	13*	(a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined	4
		for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed	
		(b) Give reasons for non-participation at each stage	4
		(c) Consider use of a flow diagram	Figure 1
Descriptive data	14*	(a) Give characteristics of study participants (eg demographic, clinical, social) and information on	Table 1
		exposures and potential confounders	
		(b) Indicate number of participants with missing data for each variable of interest	Figure 1
		(c) Cohort study—Summarise follow-up time (eg, average and total amount)	n.a.
Outcome data	15*	Cohort study—Report numbers of outcome events or summary measures over time	6-7
		Case-control study—Report numbers in each exposure category, or summary measures of exposure	
		Cross-sectional study—Report numbers of outcome events or summary measures	
Main results	16	(a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision	6-7
		(eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were	
		included	
		(b) Report category boundaries when continuous variables were categorized	
		(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time	
		period	
Other analyses	17 Rei	port other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses	n.a.
	1, 10	of undifference of the second	11.00
Discussion	10 6		0.0
Key results	18 Sur	mmarise key results with reference to study objectives	8-9

Limitations	19	Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss	9					
		both direction and magnitude of any potential bias						
Interpretation	20	Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of	9					
_		analyses, results from similar studies, and other relevant evidence						
Generalisability	21	Discuss the generalisability (external validity) of the study results	9					
Other informati	Other information							
Funding	22	Give the source of funding and the role of the funders for the present study and, if applicable, for the	n.a.					
· ·		original study on which the present article is based						

Note: An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at http://www.plosmedicine.org/, Annals of Internal Medicine at http://www.annals.org/, and Epidemiology at http://www.epidem.com/). Information on the STROBE Initiative is available at www.strobe-statement.org.

^{*}Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.
