

APPENDIX B

Table 1.

Kruskal-Wallis tests tested differences between meaning and life satisfaction measures across depth of meaning or the four motivational orientations that underlie the 10 value domains.

<i>MOV</i>	Mean / Standard Deviation					
	MLQ			MEMS		SWLS
	<i>Presence</i>	<i>Search</i>	<i>Compreh.</i>	<i>Purpose</i>	<i>Mattering</i>	
Conservation	5.11 / 1.38	4.43 / 1.58	5.14 / 1.31	5.47 / 1.01	4.65 / 1.37	4.75 / 1.52
Self-enhancement	5.12 / 1.38	4.43 / 1.58	5.14 / 1.30	5.47 / 1.01	4.65 / 1.37	4.75 / 1.52
Openness to change	5.12 / 1.38	4.43 / 1.58	5.14 / 1.30	5.47 / 1.01	4.65 / 1.37	4.75 / 1.52
Self-transcendence	5.12 / 1.38	4.43 / 1.58	5.14 / 1.30	5.47 / 1.01	4.65 / 1.37	4.75 / 1.52
$H(df) = \chi^2, p$	H(3) = .00, 1	H(3) = .00, 1	H(3) = .00, 1	H(3) = .00, 1	H(3) = .00, 1	H(3) = .00, 1

Note: $N = 276$; MOV = Motivational orientation of values; MLQ = Meaning in Life

Questionnaire; MEMS = Multidimensional Existential Meaning Scale; SWLS = Satisfaction With Life Scale; H = test statistic for Kruskal-Wallis test; df = degrees of freedom; χ^2 = Kruskal-Wallis chi-squared.
