

Supplementary Figure 1 - PEEP level and incidence of CRRT during the study period

A) PEEP level applied during the first week of ICU stay in patients divided by week of admission (1 to 10, see text for details), * $p < 0.01$ vs weeks 1 to 5, # $p < 0.05$ vs weeks 2 to 4, One Way ANOVA. B) Incidence of CRRT by week of admission. In panel A the horizontal line represents median, the box plot represents interquartile range and the bars represent minimum and maximum values
