Supporting Information

Figures:

Figure S1: Geographical locations of otters selected for analysis from England and Wales.

Figure S2: Histograms showing range of values for biotic and spatial variables used in statistical modelling.

Figure S3: Histograms of individual contaminant concentrations.

Figure S4: Model predicted contaminant concentrations with average WWTW Load (measured in population equivalent) of WWTWs in 10km radius around location of death of each otter.

Figure S5: Model predicted contaminant concentrations with percentage of arable land in 10 km radius around location of death of each otter.

Figure S6: Model predicted PFNA concentrations with otter length.

Tables:

Table S1: Descriptive statistics for each of the 15 PFAS analysed.

Table S2: GLM results for each of the 12 PFAS modelled.

¹ Change of affiliation for Juliet Hynes: Gloucestershire Wildlife Trust, Conservation Centre, Robinswood Hill Country Park, Reservoir Road, Gloucester, GL4 6SX

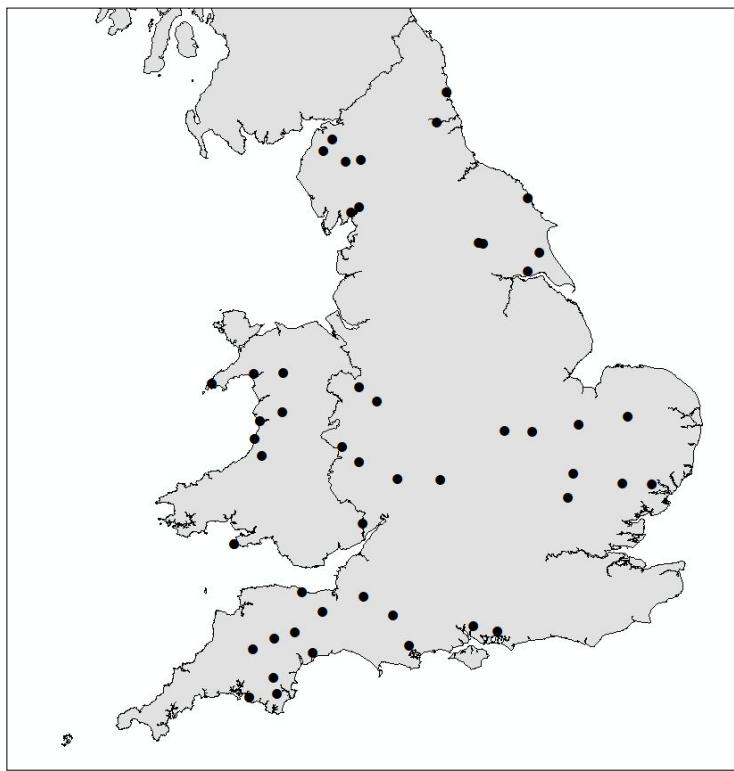

Figure S1: Geographical locations of otters selected for analysis from England and Wales. Mapped using ArcMap 10.5.1.

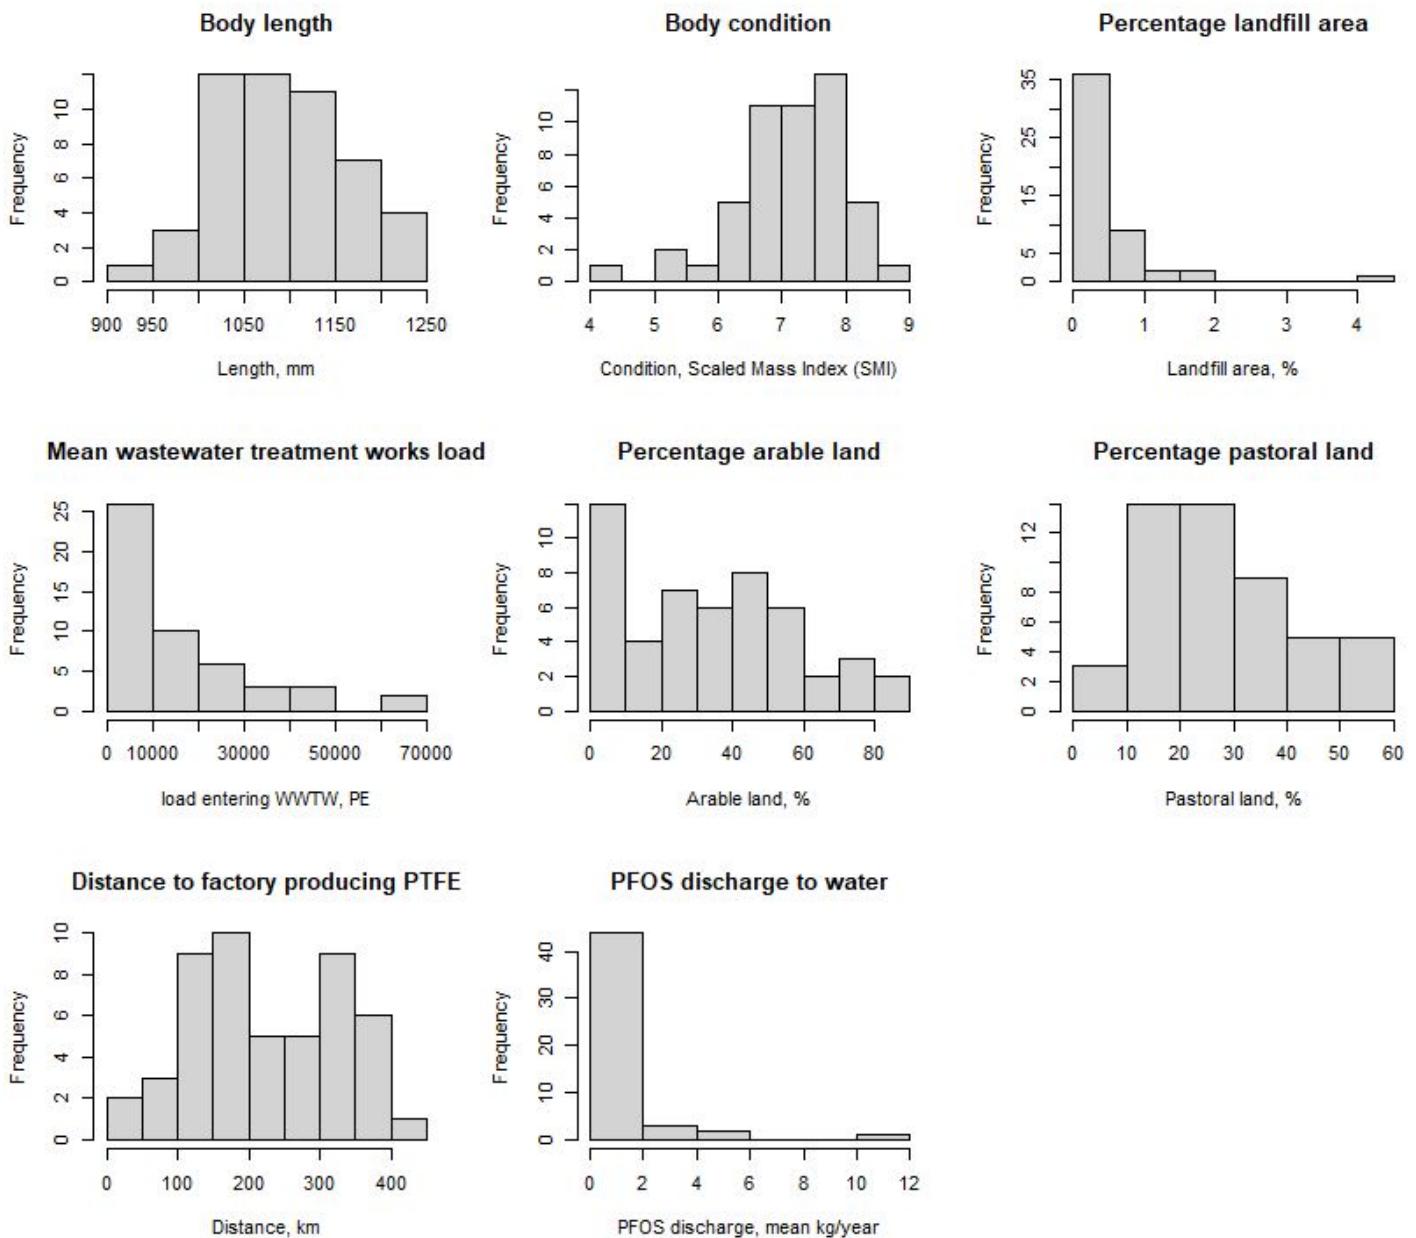

Figure S2: Histograms showing range of values for biotic and spatial variables used in statistical modelling.

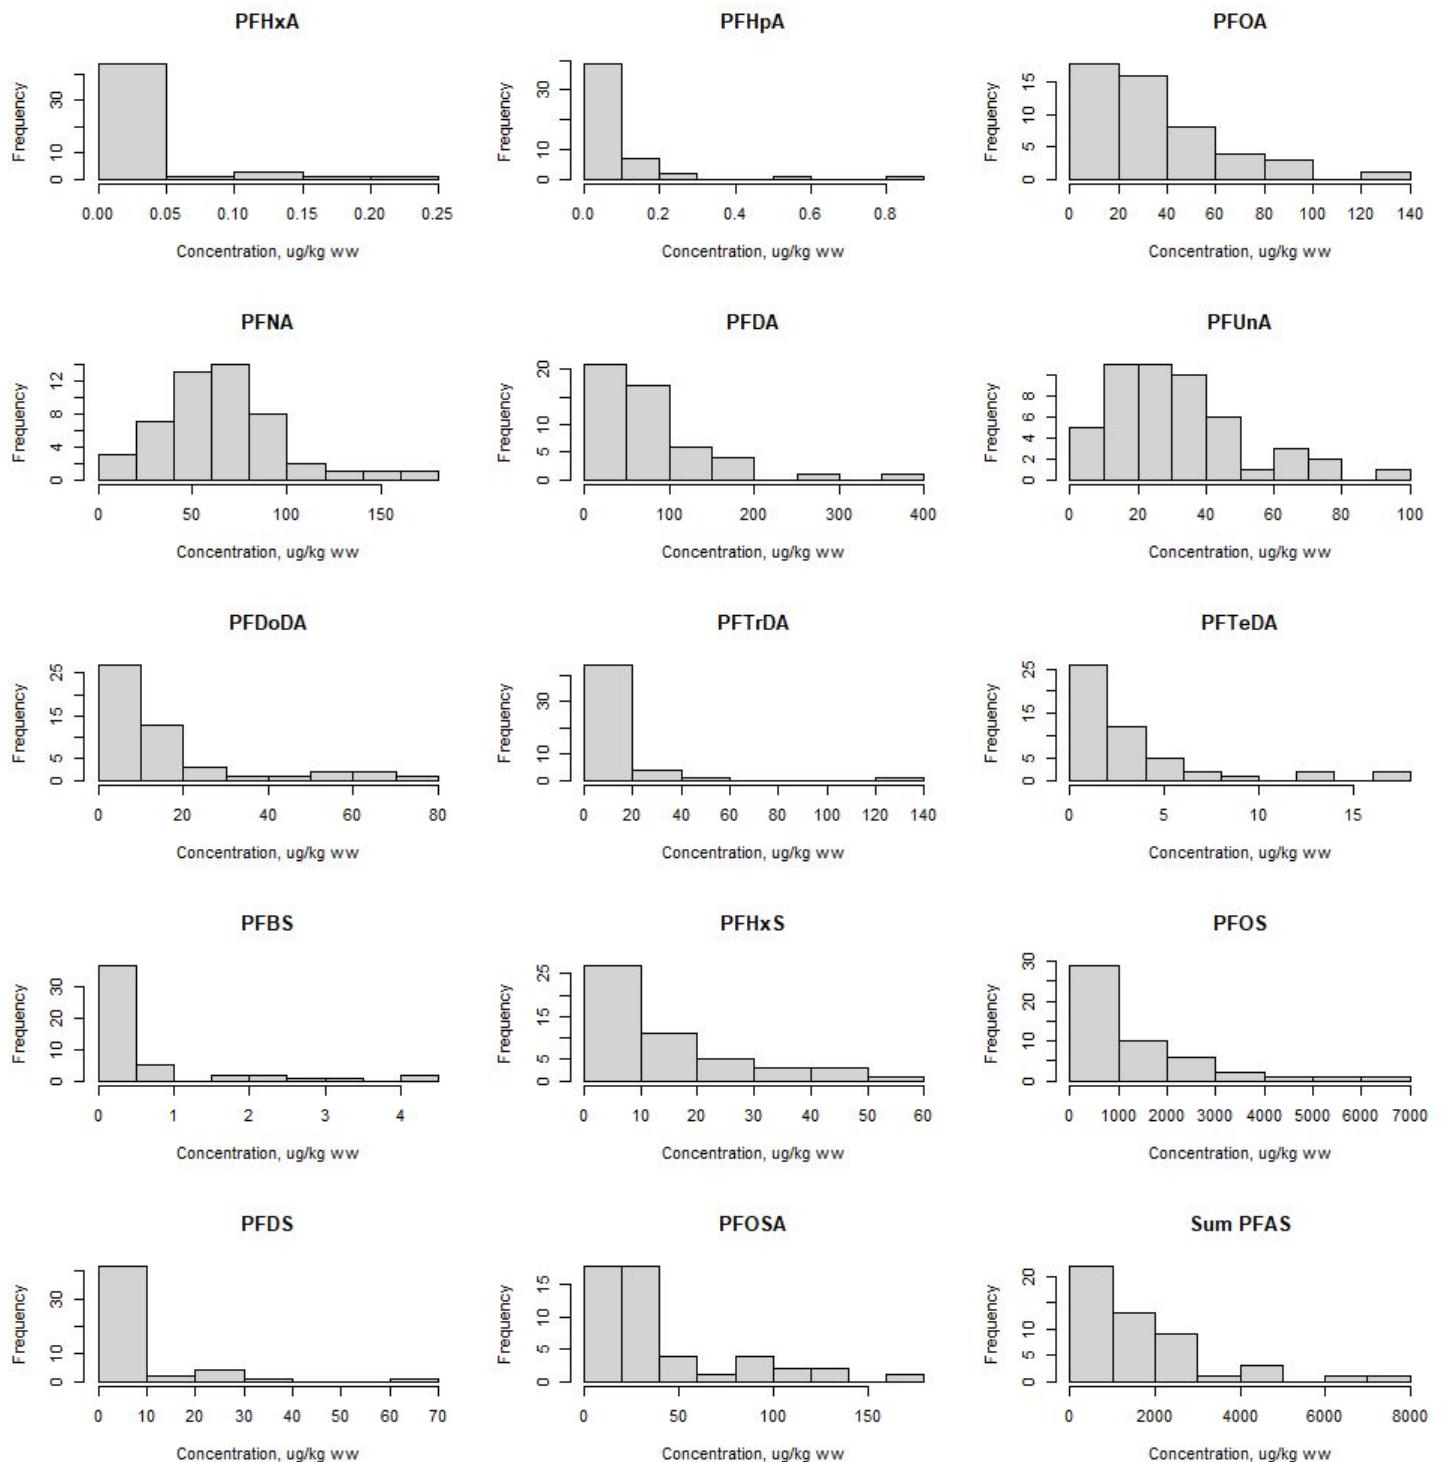

Figure S3: Histograms of individual contaminant concentrations. PFPeA not shown due to 0% detection.

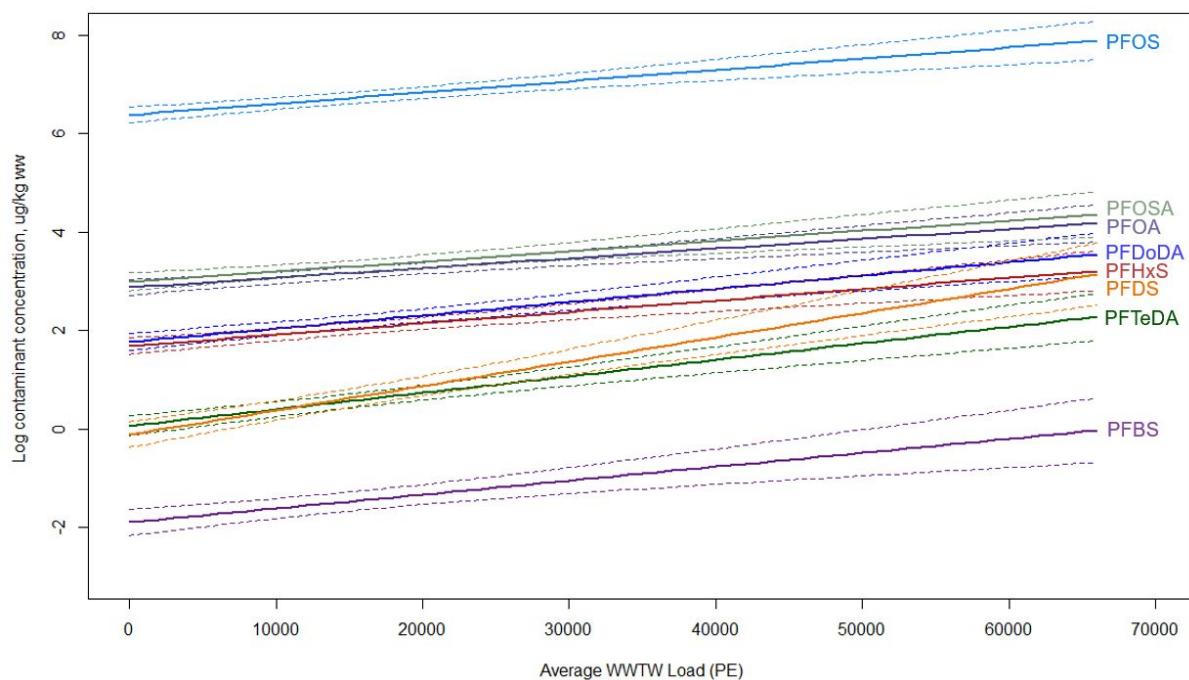

Figure S4: Model predicted contaminant concentrations (solid lines, \pm SE) with average WWTW Load (measured in population equivalent) of WWTWs in 10km radius around location of death of each otter. Other variables in the model are controlled (see statistical methods).

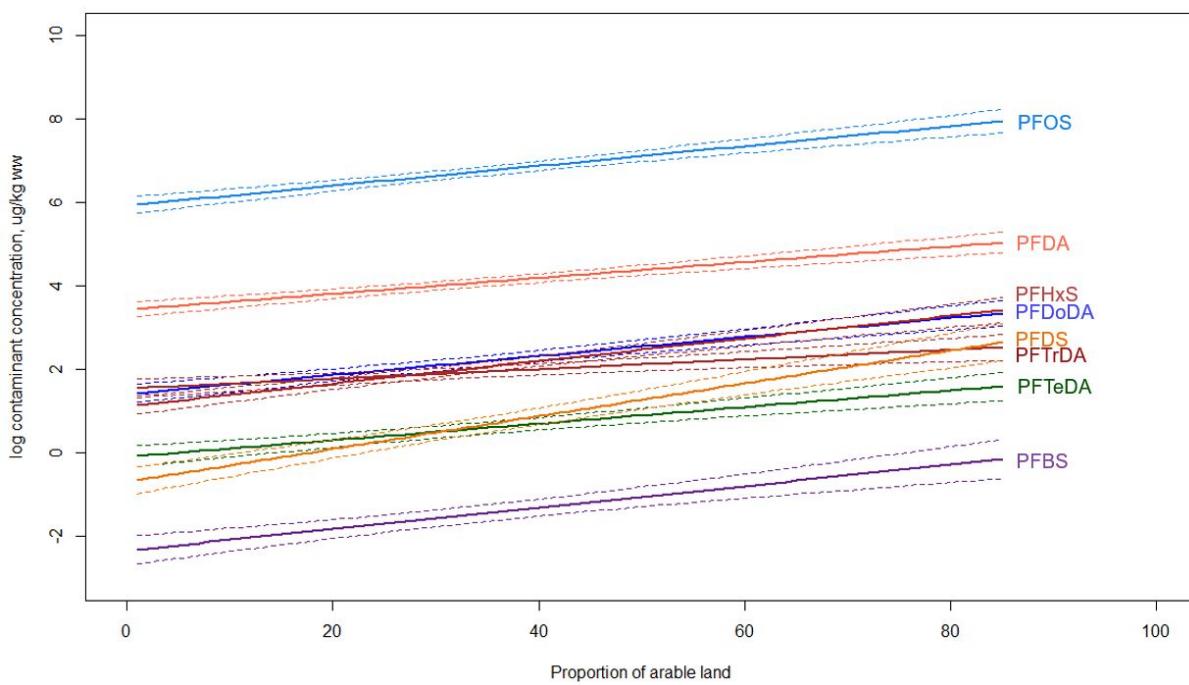

Figure S5: Model predicted contaminant concentrations (solid lines, \pm SE) with percentage of arable land in 10 km radius around location of death of each otter. Other variables in the model are controlled (see statistical methods).

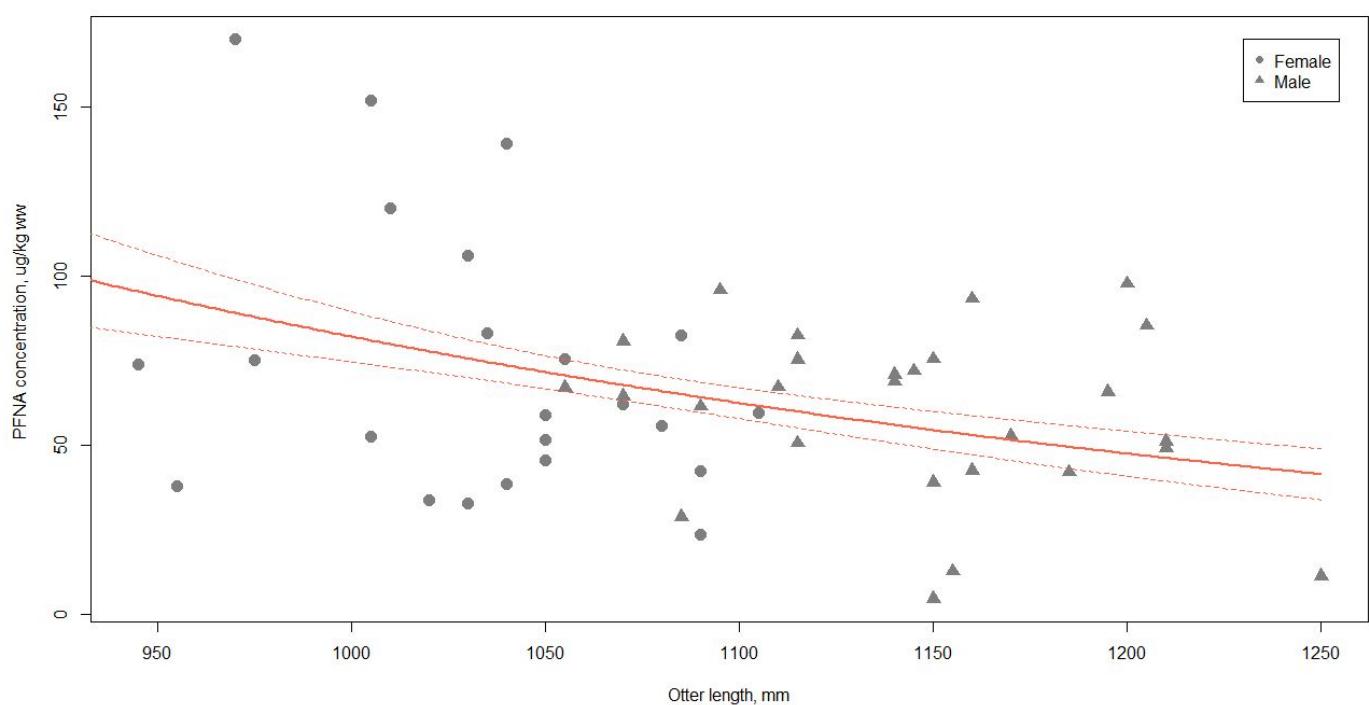

Figure S6: Model predicted PFNA concentrations (red lines, \pm SE) with otter length. Females = circles, Males = triangles. Other variables in the model are controlled (arable land, pastoral land and landfill area, see statistical methods).

Table S1: Descriptive statistics for each of the 15 PFAS analysed. Concentrations are recorded in µg/kg ww, and reported to 3 significant figures. Compounds are grouped into their types; perfluoroalkyl carboxylic acids (PFCAs) and perfluoroalkyl sulfonic acids (PFSAs) and precursor compound perfluorooctane sulfonamide (PFOSA). Mean concentrations are provided for comparison with other studies, but are not considered a good measure of the average because of highly skewed data distributions.

| Chemical abbreviation | Detection Frequency (%) | Minimum | Maximum | Median | Mean |
|---|-------------------------|---------|---------|--------|--------|
| <i>Perfluoroalkyl carboxylic acids</i> | | | | | |
| PFPeA | 0 | <LOQ | <LOQ | | |
| PFHxA | 12 | <LOQ | 0.229 | 0.0250 | 0.0382 |
| PFHpA | 42 | <LOQ | 0.843 | 0.0250 | 0.0834 |
| PFOA | 100 | 1.76 | 130 | 27.2 | 34.1 |
| PFNA | 100 | 4.41 | 170 | 63.1 | 65.5 |
| PFDA | 100 | 6.55 | 369 | 70.9 | 81.4 |
| PFUnA | 100 | 4.5 | 96.2 | 25.4 | 31.1 |
| PFDoDA | 100 | 0.572 | 75.1 | 8.84 | 15.7 |
| PFTrDA | 100 | 1 | 140 | 6.70 | 11.9 |

| PFHxS | 100 | 1.03 | 55.2 | 7.09 | 13.3 |
| PFOS | 100 | 78.8 | 6800 | 820 | 1340 |
| PFDS | 98 | <LOQ | 63.8 | 1.87 | 6.96 |
| <i>Precursor compound perfluorooctane sulfonamide</i> | | | | | |
| PFOSA | 100 | 3.35 | 171 | 28.8 | 41 |

Table S2: GLM results for each of the 12 PFAS modelled. Significance codes: ‘***’ 0.001, ‘**’ 0.01, ‘*’ 0.05, ‘.’ 0.1, ‘ ’ 1. Standardised estimates presented for averaged models. Results of single top models for PFTeDA and PFDS presented. ‘Estimate’ is the estimated coefficient, and SE is the standard error around that estimate.

| Dependent variable (number of top models) | Independent variables retained in top models | Estimate | SE | Adjusted SE | Z value | P value | Relative variable importance |
