### Multivariate analysis

No factor significant; only a trend for a lower OS in ALL compared to AML (HR: 1.88, 95% CI: 0.99-3.58)

Note: DLI, donor lymphocyte infusion; IQR, interquartile range; AML, Acute myeloid leukemia; ALL, acute lymphoblastic leukemia;

alloSCT: allogeneic stem cell transplantation, TBI, total body irradiation; CR: complete remission; MRD, minimal residual disease;

TCD, T cell depletion; GvHD, Graft-versus-Host Disease
