

Supplementary data

Figure S1

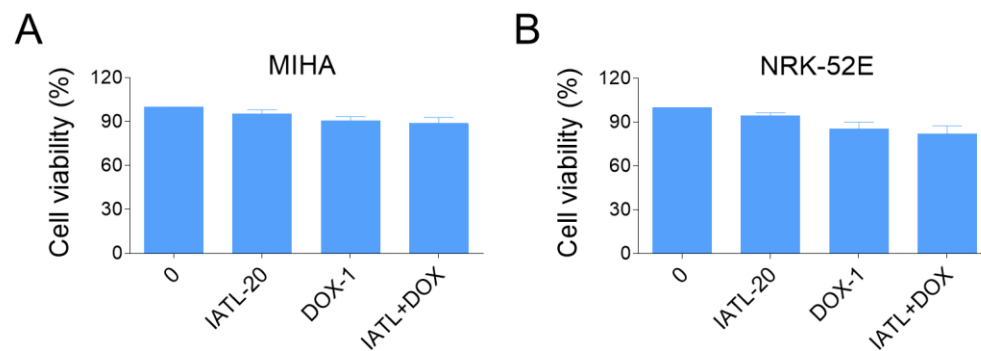

Figure S1. (A-B) Cell viability was measured after treated with IATL or DOX alone or their combination (20 μ M IATL and 1 μ M DOX) for 24 h.

Figure S2

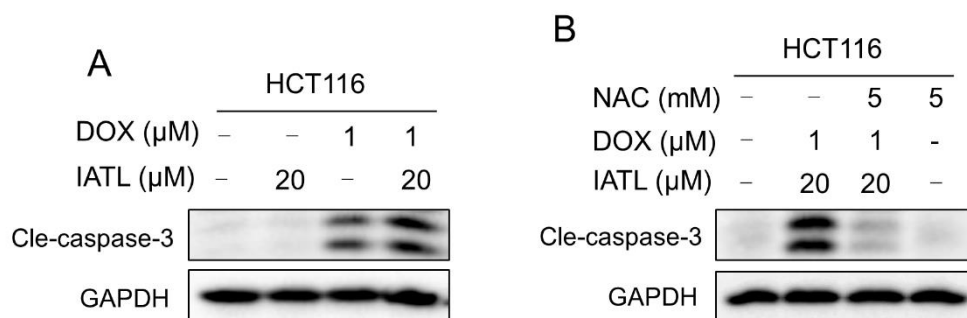

Figure S2. (A) HCT116 cells were treated with IATL or DOX alone or their combination for 20 h, the expression of cle-caspase-3 and GAPDH were examined by western blot analysis. (B) HCT116 cells were pretreated with NAC (5 mM) for 1 h and cell lysates were blotted with the indicated antibodies after treated with IATL and DOX combination for 20 h.
