

## Supplemental Materials

7/31/2021 5:53:00 PM

### Protocol: Systematic literature search for temporal discounting

The procedure of the search was performed based on our preregistration (<https://osf.io/e4anc>) and the papers retrieved were collected in a Zotero group and then uploaded onto covidence.

1. A computerized literature search was performed using PsycINFO and PubMED with a combination of keywords related to time preferences, including the names of specific questionnaires or tasks used to measure temporal discounting mentioned in general literature reviews of temporal discounting.

Looking for measurements:

The 3 reviews listed in the preregistration under “literature search” (point 1) were screened. The following is information extracted from the individual reviews:

**Cross, Copping, & Campbell, 2011:** Experiential discounting task

**Pauli-Pott & Becker, 2015:** Choice delay task, delay/temporal discounting task, Mandsley index of delay aversion, Delay Frustration Task

**Sharma, Markon, & Clark, 2014:** Delay of Gratification Task

**Kirby & Maraković, 1996:** The Kirby questionnaire (monetary choice questionnaire)

The following input was entered in Pubmed using the following filters: title, abstract and selected Meshterms (temporal discounting, aging, aged). The benefit of searching for Meshterms is that the search will retrieve references on a topic in Pubmed regardless of the wording of the author.

02.01.19 → 167 hits

("delay of gratification"[Title/Abstract] OR "delay discounting"[Title/Abstract] OR "temporal discounting"[Title/Abstract] OR "intertemporal choice"[Title/Abstract] OR "inter-temporal choice"[Title/Abstract] OR "delay aversion"[Title/Abstract] OR "discounting task"[Title/Abstract] OR "delay task"[Title/Abstract] OR "experiential discounting task"[Title/Abstract] OR "choice delay task"[Title/Abstract] OR "temporal discounting task"[Title/Abstract] OR "maudsley index of delay aversion"[Title/Abstract] OR "delay frustration task"[Title/Abstract] OR "delay of gratification task"[Title/Abstract] OR "kirby questionnaire"[Title/Abstract] OR "monetary choice questionnaire"[Title/Abstract] OR "delay discounting"[Mesh:NoExp]) AND ("aging"[Title/Abstract] OR "older adults"[Title/Abstract] OR "elderly"[Title/Abstract] OR "age differences"[Title/Abstract] OR "aging"[Mesh:NoExp] OR "aged"[Mesh:NoExp])

The following input was entered in OVID, which is provided by Unibasel as a tool to search in the PsycInfo database. The search was performed in the advanced search using the following filters: ti= title and ab=abstract and sh= subject headings (Delay of gratification, Delay discounting, Aging, Age differences). The benefit of searching for subject headings is that the search will retrieve references on a topic in PsychInfo regardless of the wording of the author.

02.01.19 → 152 hits

(("delay of gratification" or "delay discounting" or "temporal discounting" or "intertemporal choice" or "inter-temporal choice" or "delay aversion" or "discounting task" or "delay task" or "experiential discounting task" or "choice delay task" or "temporal discounting task" or "maudsley index of delay aversion" or "delay frustration task" or "delay of gratification task" or "kirby questionnaire" or "monetary choice questionnaire").ti,ab. or ("delay of gratification" or "delay discounting").sh.) and ((aging or "older adults" or elderly or "age differences").ti,ab. or (aging or "age differences").sh.)

2. Additionally, to the keyword search in *Pubmed* and *PsycInfo*, the following keyword search was performed in the *web of science core collection* database using the advanced search. The filter “TS= Topic” was used for the search. TS searches the following fields within a record: Title, Abstract, Author Keywords and Keywords Plus. The web of science core collection does not have index terms, which would be equivalent to Meshterms (pubmed) or subject headings (psychInfo). This step is not listed in the preregistration.

02.01.19 → 714 hits:

TS=(“delay of gratification” or “delay discounting” or “temporal discounting” or “intertemporal choice” or “inter-temporal choice” or “delay aversion” or “discounting task” or “delay task” or “experiential discounting task” or “choice delay task” or “temporal discounting task” or “maudsley index of delay aversion” or “delay frustration task” or “delay of gratification task” or “kirby questionnaire” or “monetary choice questionnaire”) and TS=(aging or “older adults” or elderly or “age differences”)

3. Articles citing the original papers listed under “literature search” (point 2) in the preregistration were searched for in *Pubmed*, *PsycInfo* and *Web of science core database* (WOS is not listed in preregistration) and included.

Pubmed: (26.11.18)

**Kirby & Maraković, 1996:** 105 hits

**Kirby, Petry, & Bickel, 1999:** 400 hits

**Coller & Williams, 1999:** not in the database

**Mischel, Shoda, & Rodriguez, 1989:** 296

PsycInfo (26.11.18):

**Kirby & Maraković, 1996:** 71 hits

**Kirby, Petry, & Bickel, 1999:** 259 hits

**Coller & Williams, 1999:** not in the database

**Mischel, Shoda, & Rodriguez, 1989:** 268

Web of science core database (22.01.19)

**Kirby & Maraković, 1996:** 356 hits

**Kirby, Petry, & Bickel, 1999:** 972 hits

**Coller & Williams, 1999:** not in the database

**Mischel, Shoda, & Rodriguez, 1989:** 1275 hits

4. All papers cited in the reviews listed under “literature search” (point 3), were individually searched in either *Pubmed* or cross referenced and included.

After collecting the papers from the search all the papers were uploaded to the software covidence.

<b>Supplementary Table 1</b> <b>References excluded at the full-text screening</b>					
<b>Exclusion label</b>	<b>Description</b>	<b>Rationale</b>	<b>Article and year</b>	<b>N</b>	
No access	If the article was not freely available or if the reference was incorrect, the article was excluded as “no access”.	Only full text papers can provide data to include in the meta-analysis.	Antonides & Wunderink (2001) Bochner & Kenneth (1968) Drobetz, Maercker & Forstmeier (2010) Drobetz, Maercker & Forstmeier (2011) Kirby (1997)	Loeckenhoff, O'Donoghue & Dunning (2010) Ownby, Marconi, Waldrop-Valverde (2015) Takahashi, Oono, Ohmura, Kitamura & Radford (2009)	8
Wrong format	If the article was given in another format than an experimental study (e.g. book chapter, dissertation) then the article was excluded as “wrong format”.	We focused on empirical reports for which full texts could be accessed.	Aadland & Sherrill (2015) Adams (2009) Ainslie (1975) Albert (2012) Attanasio & Jappelli (2001) Bari, Kellermann, & Studer (2016) Becker & Mulligan (1994) Becker (1997) Bradford & Burgess (2010) Chao et al. (2009) Chapman (2005) Dodd (2008) Dai (2012) Enzler, Diekmann, & Meyer (2013) Rambaud, Oller & Martinez (2018) Forstmeier & Maercker (2011) Frye, Galizio, Friedel, DeHart & Odum (2016) Gold, Waltz, Prentice, Morris & Heerey (2008) Grabowski, Pollak & Czerw (2017) Green, Myerson & Ostaszewski (1999) Hampton (2019) Hassenzahl & Laschke (2014) Halevy (2004) Hausman (1979) Kastenbaum (1966) Keller & Strazzena (2012) Killeen (2009)	Komlos (2004) Lawrance (1991) Lattimore & Hutter (2014) Loewenstein (1987) Loewenstein & Prelec (1992) Mazur (1987) Moore & Symons (2005) Moreno (2016) Myerson & Green (1995) Myerson, Green & Warusawitharana (2001) Ortendahl & Sjoberg (1979) Pehlivanovo (2018) Prelec & Loewenstein (1991) Rachlin (1995) Rachlin, Safin, Arfer & Yen (2015) Ray & Bossaerts (2011) Samanez-Larkin, Carstensen & McClure (2010) Samanez-Larkin, Hagen & Weiner (2014) Schlosnagle (2013) Smith & Boettiger (2014) Takahashi (2005) Tate (2016) Vanderveldt (2017) Wittmann & Paulus (2009) Wittmann & Paulus (2016)	52
Wrong study design	If the study design was other than an experimental study we excluded the article as “Wrong study design”.	The purpose of this exclusion criteria, was to limit potential in-between variance and to ensure a satisfying qualitative comparability between the results.	Agarwal, Driscoll, Gabaix, & Laibson (2009) Baker, Johnson, & Bickel (2003) Cadena & Keys (2015) Clare, Helps, Sonuga-Barke & Edmund (2010) Dai, Pleskac & Pachur (2018) de Wit, Enggasser & Richards (2002) Deaton (2018) Dickman (1990) Hershfield et al. (2011)	Kaplan et al. (2016) Luo, Ainslie & Monterosso (2014) Michaelson, de la Vega, Chatham & Munakata (2013) Prevost et al. (2010) Reynolds, Richards, Dassinger & de Wit (2004) Walther (2010) Wang & Dvorak (2010) Worbe, Savulich, Voon, Fernandez-Egea & Robbins (2014)	18
Subsample	If the sample was a subsample of another included study then the study was excluded under the label “subsample”.	We aimed to avoid including the same data (or subsets of data) multiple times in our analyses.	Anderson, Harrison, Lau, & Rutström (2014) Anderson, Harrison, Lau, & Rutström (2008)	James, Boyle, Yu, Han & Bennett (2015) Johnson et al. (2010)	4

Wrong Subjects	If the sample only consisted of patients with cognitive impairment (e.g. Alzheimers or other disorders (e.g. drug addiction, pathological gambling, depression) known to impair cognition, the study was excluded under the label “wrong subjects”.	Individuals with cognitive impairment or other disorders, may have significantly different monetary time preferences, compared to individuals without such an impairment (e.g. Maccallum, Fiona; Bonanno 2016). Excluding these studies limits potential confounds introduced by impairment differences.	Amlung & MacKillop (2014) Andrade, Alessi, & Petry (2013) Andrade & Petry (2014) Andrade & Petry (2012) Athanneh, Stein, Quisenberry & Pope (2017) Banca et al. (2016) Callan, Shead & Olson (2011) Celma-Merola, Abella-Pons, Mata, Pedra-Pages & Verdejo-Garcia (2017) Chamorro et al. (2012) Cherek & Lane (1999) Cherek, Moeller, Dougherty & Rhoades (1997)	Duva, Silverstein, Steven & Spiga (2011) Epstein et al. (2003) Gray & MacKillop (2014) Halfmann et al. (2013) Hanoch, Rolison & Gummerum (2013) Hofmeyr et al. (2017) Maccallum et al. (2016) Meade, Lowen, MacLean, Key & Lukas (2011) Smith, Steel, Parrish, Kelm & Boettiger (2015) Szuhany, MacKenzie & Otto (2018) Tompkins et al. (2016) Vuchinich & Simpson (1998)	23
No age comparison	If no age comparison was given studies were excluded under the label “no age comparison”.	The analysis tests for age differences, so if a study did not provide either the raw data, or an age comparison, it was not included in the analysis.	Acheson, Vincent, Sorocco, & Lovallo (2011) Acuff, MacKillop, & Murphy (2018) Ahn, Ramesh, Moeller, & Vassileva (2016) Ahn et al. (2011) Albein-Urios, Martinez-González, Lozano, & Verdejo-Garcia (2014) Albein-Urios, Martinez-González, Lozano, Clark, & Verdejo-Garcia (2012) Anderson, Harrison, Lau, & Rutström (2013) Appelhans (2011) Arantes, Berg, Lawlor, & Grace (2013) Arechar, Kraft-Todd, & Rand (2017) Arfer & Luhmann (2017) Arfer & Luhmann (2015) Ashare & Kable (2015) Ashare & McKee (2012) Athanneh, Stein, & Bickel (2017) Augenblick, Niederle, Sprenger (2015) Ayecinema & Rentschler (2018) Aranovich (2016) Baker, Johnson, & Bickel (2003) Ballard et al. Wrong indication	If the studies did not report a temporal discounting outcome, or did not provide enough information to enable the calculation of the effect sizes, we excluded the study as “wrong indication”.	It had to be possible to calculate an age effect size concerning temporal discounting from the results of the study to have it included in the meta-analysis. Therefore, we excluded all studies for which this was not possible.	Albert (2012) Anderson et al. (2009) Axon (2009) Behan, Stone, & Garavan (2015) Berman et al. ## Bayesian Meta-Analysis

We used the `brms` package (Bürkner, 2017, 2018) to conduct a Bayesian meta-analysis. We set our prior for the pooled effect size  $\mu$  as a normal distribution with a mean of 0 and standard deviation of 1 and the prior for the study heterogeneity  $\tau$  as a Half-Cauchy distribution with a peak of 0 and scaling parameter of 0.5. The model converged and produced reliable estimates with 6000 iterations. This model produced an estimate of the pooled effect size,  $\mu = -0.05$ , 95% CI [-0.13, 0.03], and an estimate of study heterogeneity,  $\tau = 0.27$ , 95% CI [0.22, 0.34]. These are consistent with our frequentist meta-analytic results as the estimates of the effect size are similar and the confidence/credible intervals contain zero.

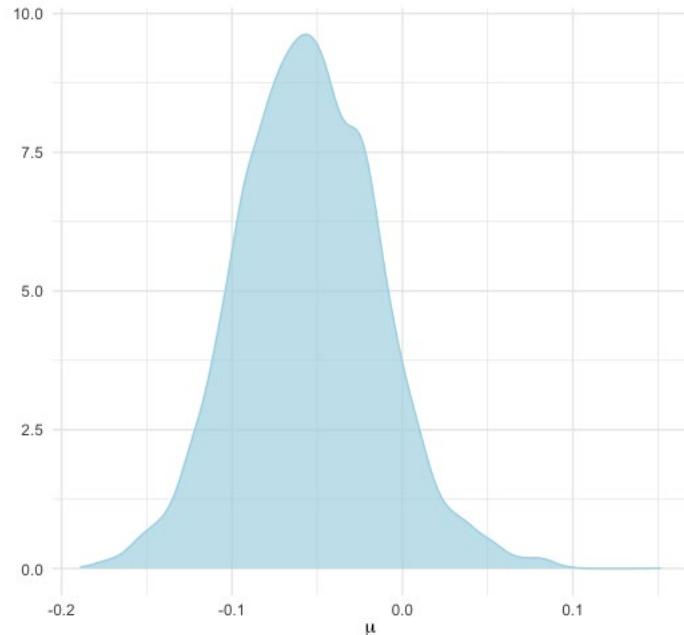

Figure S1: Posterior distribution of pooled effect of age on temporal discounting.

Using the posterior distribution (Figure S1), we next tested three hypotheses: 1) that the effect of age on discounting was greater than zero ( $z > 0$ ), (2) that the effect of age on discounting was less than zero ( $z < 0$ ), and (3) that the magnitude of the negative effect of age on discounting was greater than a small effect ( $z = 0.1$ ). For the first hypothesis, we found little support for the effect of age on discounting to be greater than zero (9% probability of effect being greater than 0, Evidence Ratio (half Bayes Factor) = 0.095). For the second hypothesis, we found strong support (91% probability of pooled effect being less than 0, Evidence Ratio = 10.483) for the effect of age on discounting to be less than zero. However, we found little support for the hypothesis that the magnitude of this effect was greater than a small effect (13.1% probability of pooled effect being less than -0.1, Evidence Ratio = 0.15). Collectively, these results suggest that age has a *very* small, negative effect of discounting with age such that older adults discount less than younger adults.
