

Supplemental information

Preventing packaging of translatable

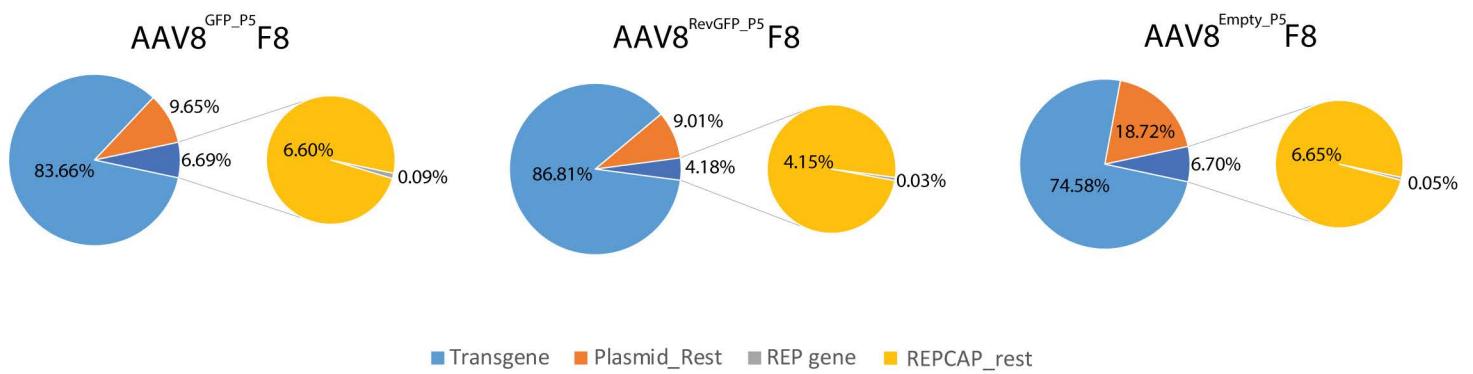

P5-associated DNA contaminants

in recombinant AAV vector preps

Mark A. Brimble, Pei-Hsin Cheng, Stephen M. Winston, Isaiah L. Reeves, Aisha Souquette, Yunyu Spence, Junfang Zhou, Yong-Dong Wang, Christopher L. Morton, Marcus Valentine, Paul G. Thomas, Amit C. Nathwani, John T. Gray, and Andrew M. Davidoff

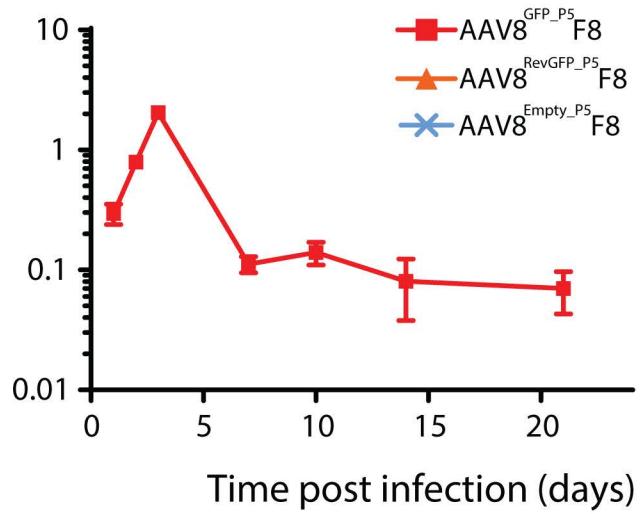

Supplementary Figure 1. Contaminant reporter cassettes in AAV REPCAP plasmids.
 Schematic of designed P5-associated contaminant AAV REPCAP constructs used for production of AAV8ssHLPhFVIII. Forward facing arrows denote transcriptional start site. Downward arrows denote location of start codon

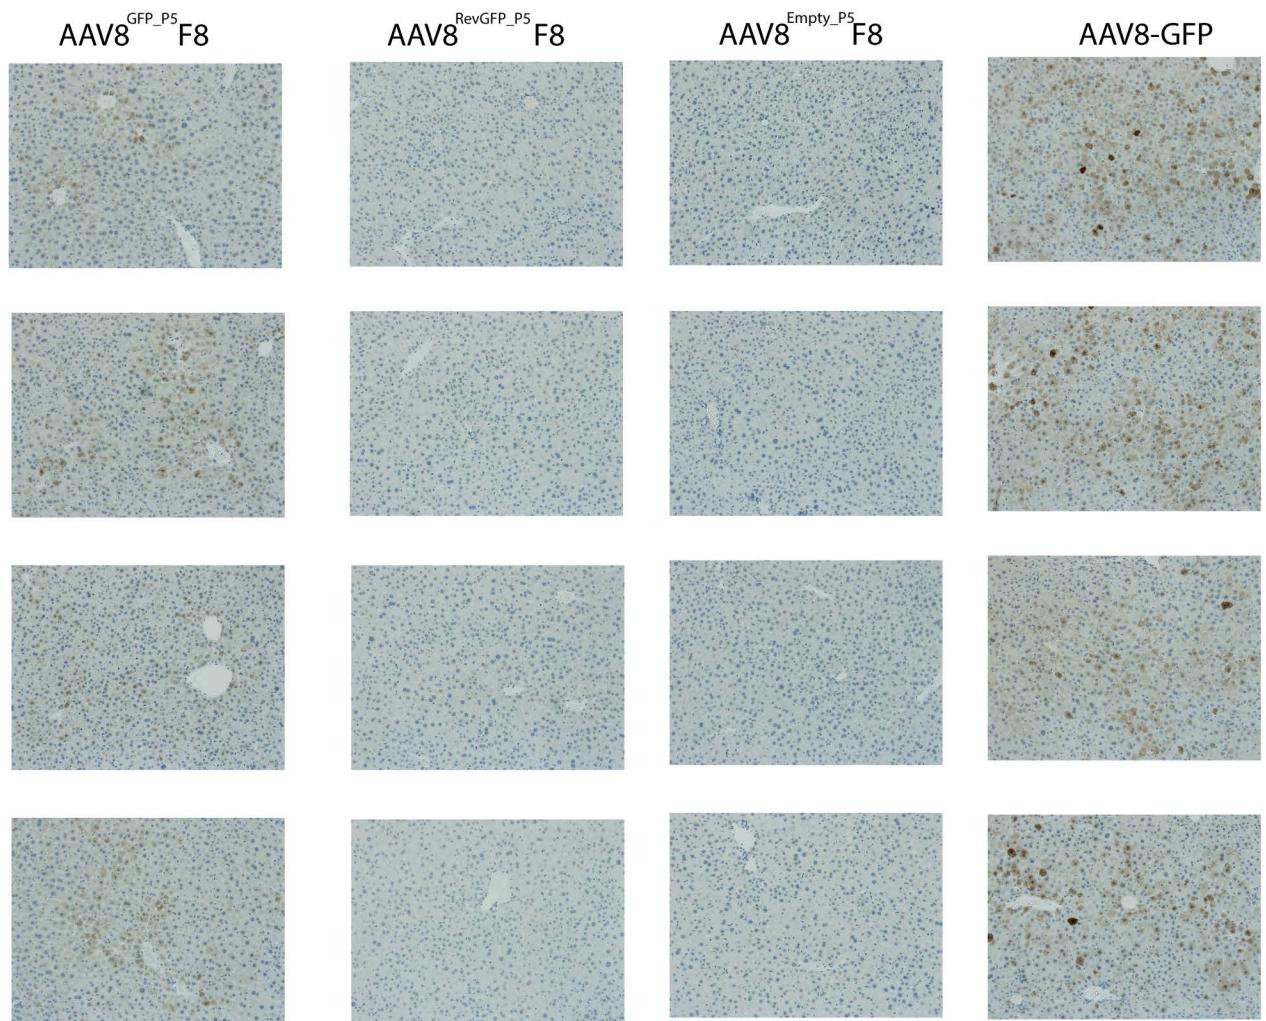

Supplementary Figure 2. Incorporation of designed P5-associated contaminants in rAAV.

Pie charts of NGS confirmation of designed P5-associated contaminants within AAV. For AAV8^{GFP_P5}F8 (left), AAV8^{RevGFP_P5}F8 (middle), and AAV8^{Empty_P5}F8 (right). Reads mapped as in Fig. 1d.

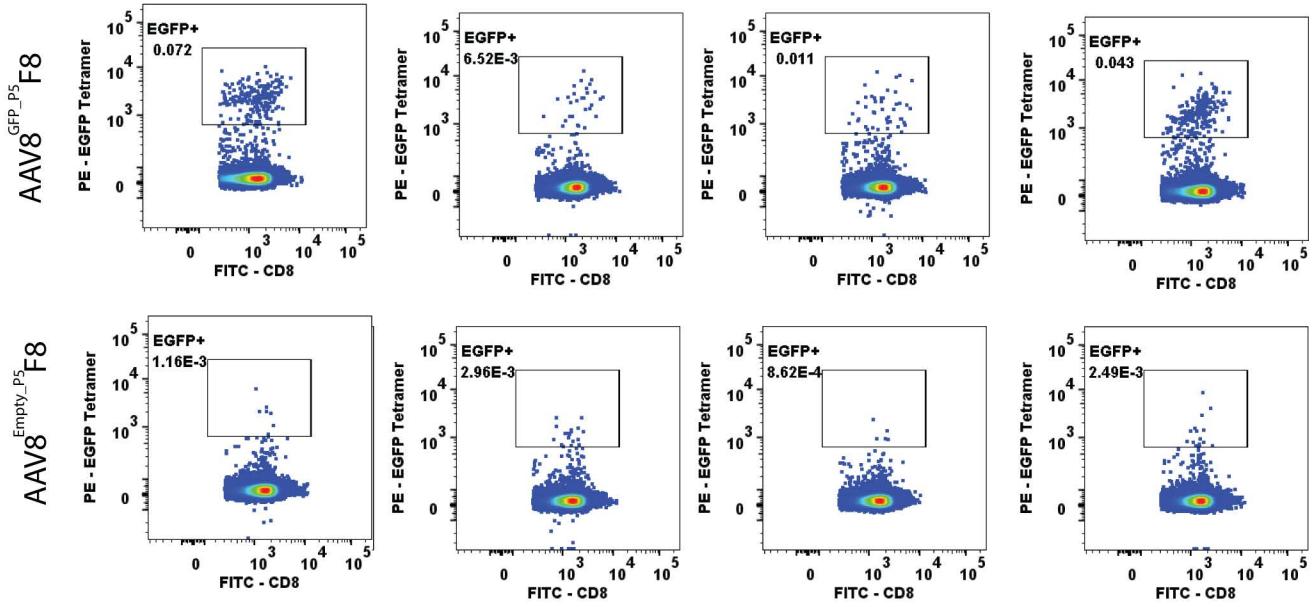

Supplementary Figure 3. Contaminant translation in continually passaged 293T cells.
 Logarithmic representation of data depicted in figure 2d: Time course graph depicting detectable GFP positive cells in AAV8ssHLPhFVIII post infected (5e6 MOI) with AAV8^{GFP_P5}F8 (red), AAV8^{REVGFP_P5}F8 (Orange) or AAV^{Empty_P5}F8 (Blue). (Values for AAV8^{REVGFP_P5}F8 and AAV^{Empty_P5}F8 all below y-axis limit).

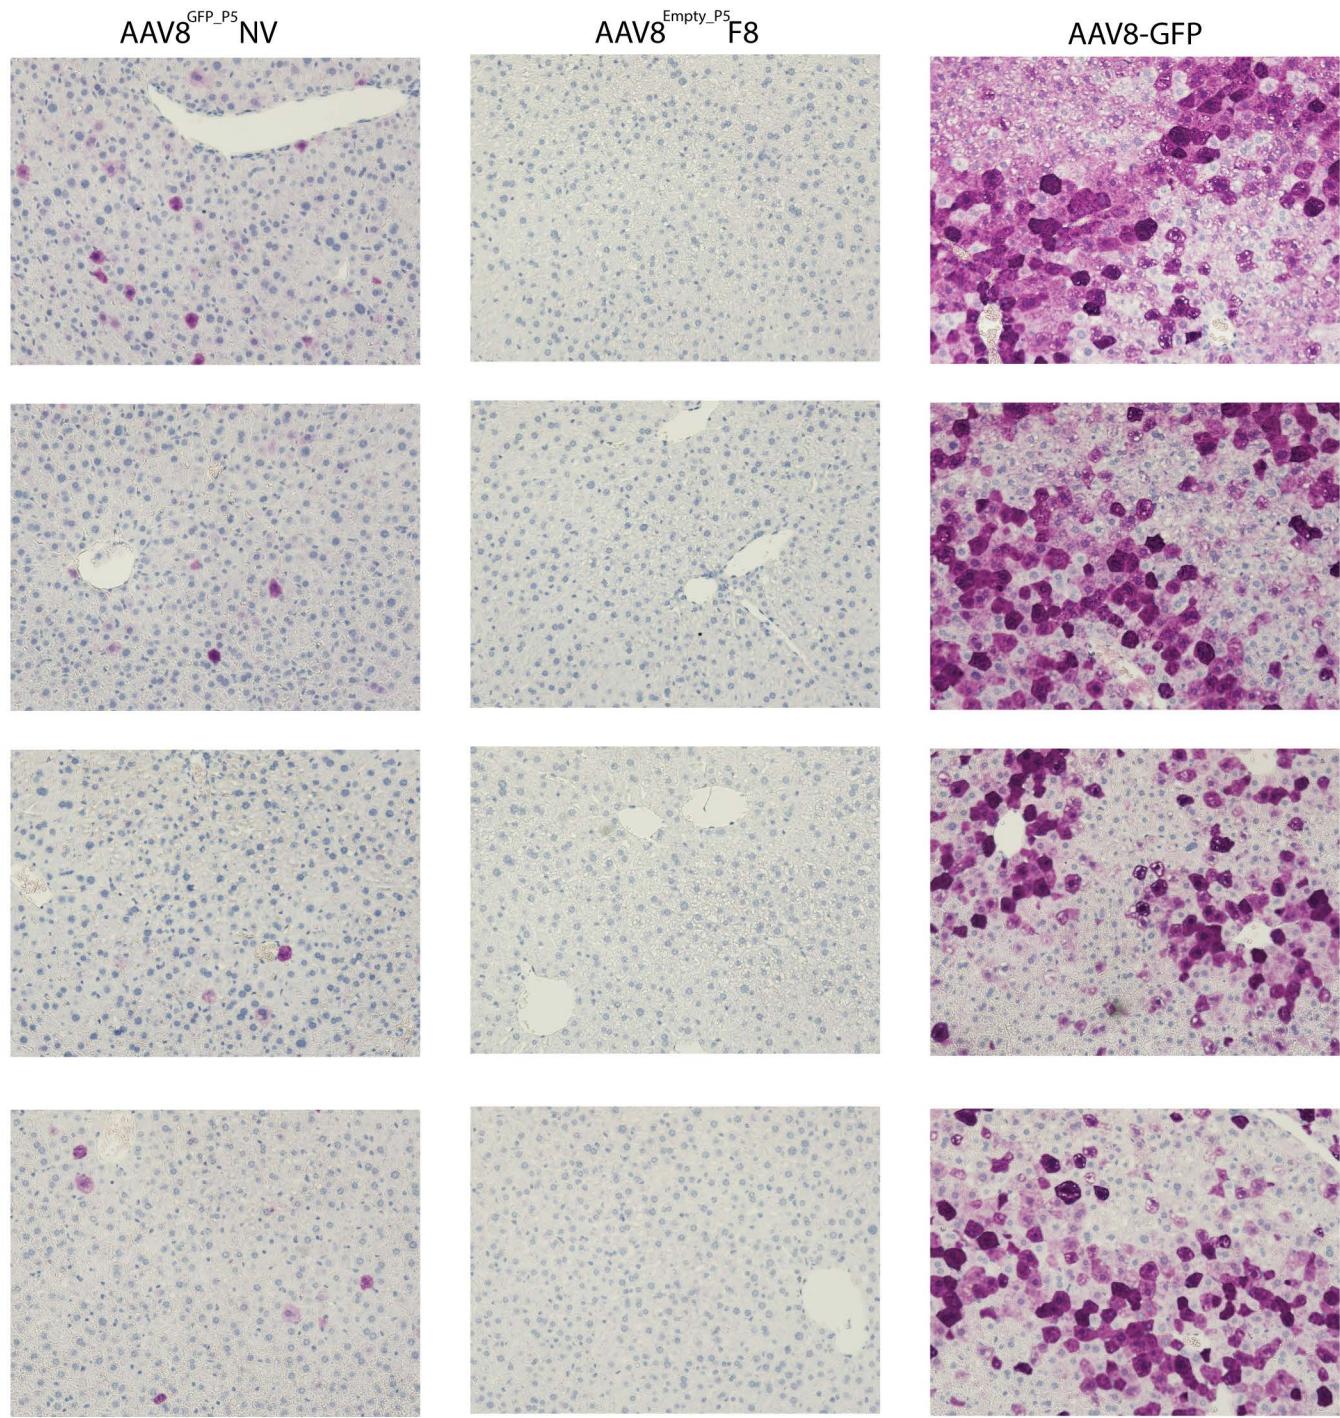

Supplementary Figure 4. Translation of P5-associated rAAV contaminants.

Representative IHC images of C57BL/6J mouse liver sections stained for GFP protein 1-week post 9.4×10^{11} vg AAV8ssHLPhFVIII infection from each additional mouse in treatment groups from experiment shown in Fig. 1h.

Supplementary Figure 5. Immunogenicity of P5-associated rAAV contaminants.

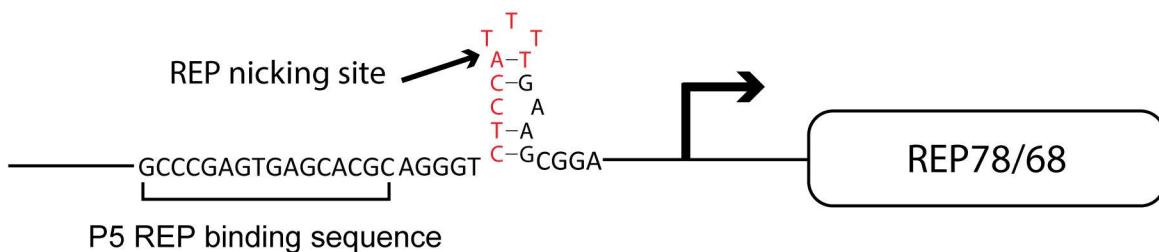

FACS plots for BALB/cJ GFP reactive splenic CD8+T cells 9 days post infection from each additional mouse in experiment shown in Fig. 2f. Top row: AAV8^{GFP_P5}F8; bottom row: AAV^{Empty_P5}F8.

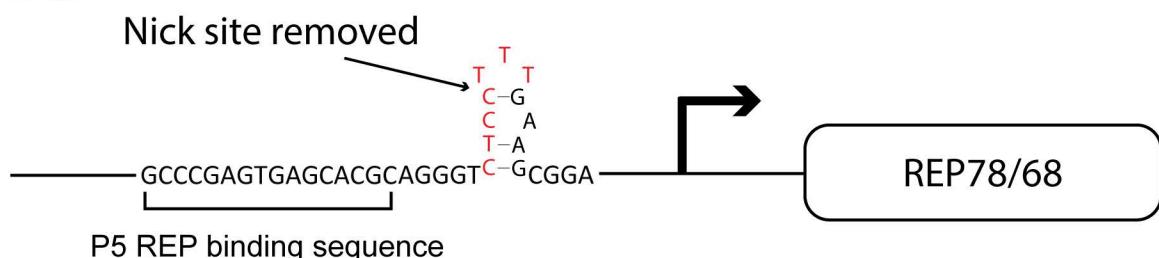

Supplementary Figure 6. Translation of P5-associated rAAV contaminants in absence of expression cassette.

Representative IHC images of C57BL/6J mouse liver sections stained for GFP protein 1-week post 2.7×10^{11} vg GFP copy infection from each additional mouse in treatment groups from experiment shown in Fig. 4d.

Supplementary Figure 7. Alternative P5 promoter designs.

(a-b) Schematics of AAV production REP78/68 promoters **(a)** P5 promoter detailing REP binding site in relative positioning to YY1+1 binding site (red), **(b)** P5 Δ nick promoter in which the AT dinucleotide within the YY1+1 binding site (red) has been deleted. Forward facing arrows denote transcriptional start site. **(c-d)** P5-HS promoter designs: **(c)** Sequence of P5-HS5 promoter with spacer sequence (blue) and YY1+1 binding site (red) highlighted. **(d)** Sequence of P5-HS100 promoter with spacer sequence (blue) and YY1+1 binding site (red) highlighted.

AAV8scLP1hFIXco

AAV8ssHLPhFVIII

Supplementary Figure 8. Cell factory scale P5-HS production.

(a+b) AAV8scLP1hFIXco and (c+d) AAV8ssHLPhFVIII analyzed by qPCR for titer (a+c) and relative contamination upstream of the REP78/68 promoter (b+d).
