**Editorial Note:** This manuscript has been previously reviewed at another journal that is not operating a transparent peer review scheme. This document only contains reviewer comments and rebuttal letters for versions considered at *Nature Communications*.

**REVIEWERS' COMMENTS** 

Reviewer #1 (Remarks to the Author):

The manuscript by Seger, Gong and co-workers has been revised thoroughly and many clarifications have been added. The authors undertook an enormous effort (including a set of additional experiments) to tackle all comments and questions raised during my first review. After carefully reading the response from the authors I am satisfied with the current version of the manuscript. Therefore, I recommend publication in Nature Communications.

Reviewer #2 (Remarks to the Author):

The authors have carefully addressed all points raised by the referees. The quality of the report is improved and publication is now recommended without further revision.
