Supplementary figure 1

Supplementary Figure 1: Frequency histogram showing the direction of ratio estimates from the inverse-variance weighted average (IVWA) analysis of the best Framingham predictor in the KORA data set. Results are binned by the p-value from the IVWA analysis. Results are binned by p-value. The colored bars indicated with the direction of the association is in the expected direction (i.e. a positive association) or in the opposite direction.

Supplementary Table 6: Summary of associations for proteins associated with thrombosis phenotype. Shown are associated with either "Deep vein thrombosis" (n=1,491 case) or "Other venous embolism and thrombosis" (n=3,537 cases). A "Yes" in the ABO column indicates that the association was not significant ($p>0.01$) when SNPs located in the ABO region were removed from the predictor.
