

Figure, Supplemental Digital Content 4.
Distribution of daily dairy fat intake by age (A), sex (B), and BMI z-score (C).
 Dairy fat intake was not significantly associated with age ($r = 0.06$, $p = 0.148$) and did not significantly differ by sex ($p = 0.911$). Dairy fat intake was significantly inversely associated BMI z-score ($r = -0.20$, $p = 0.002$).
