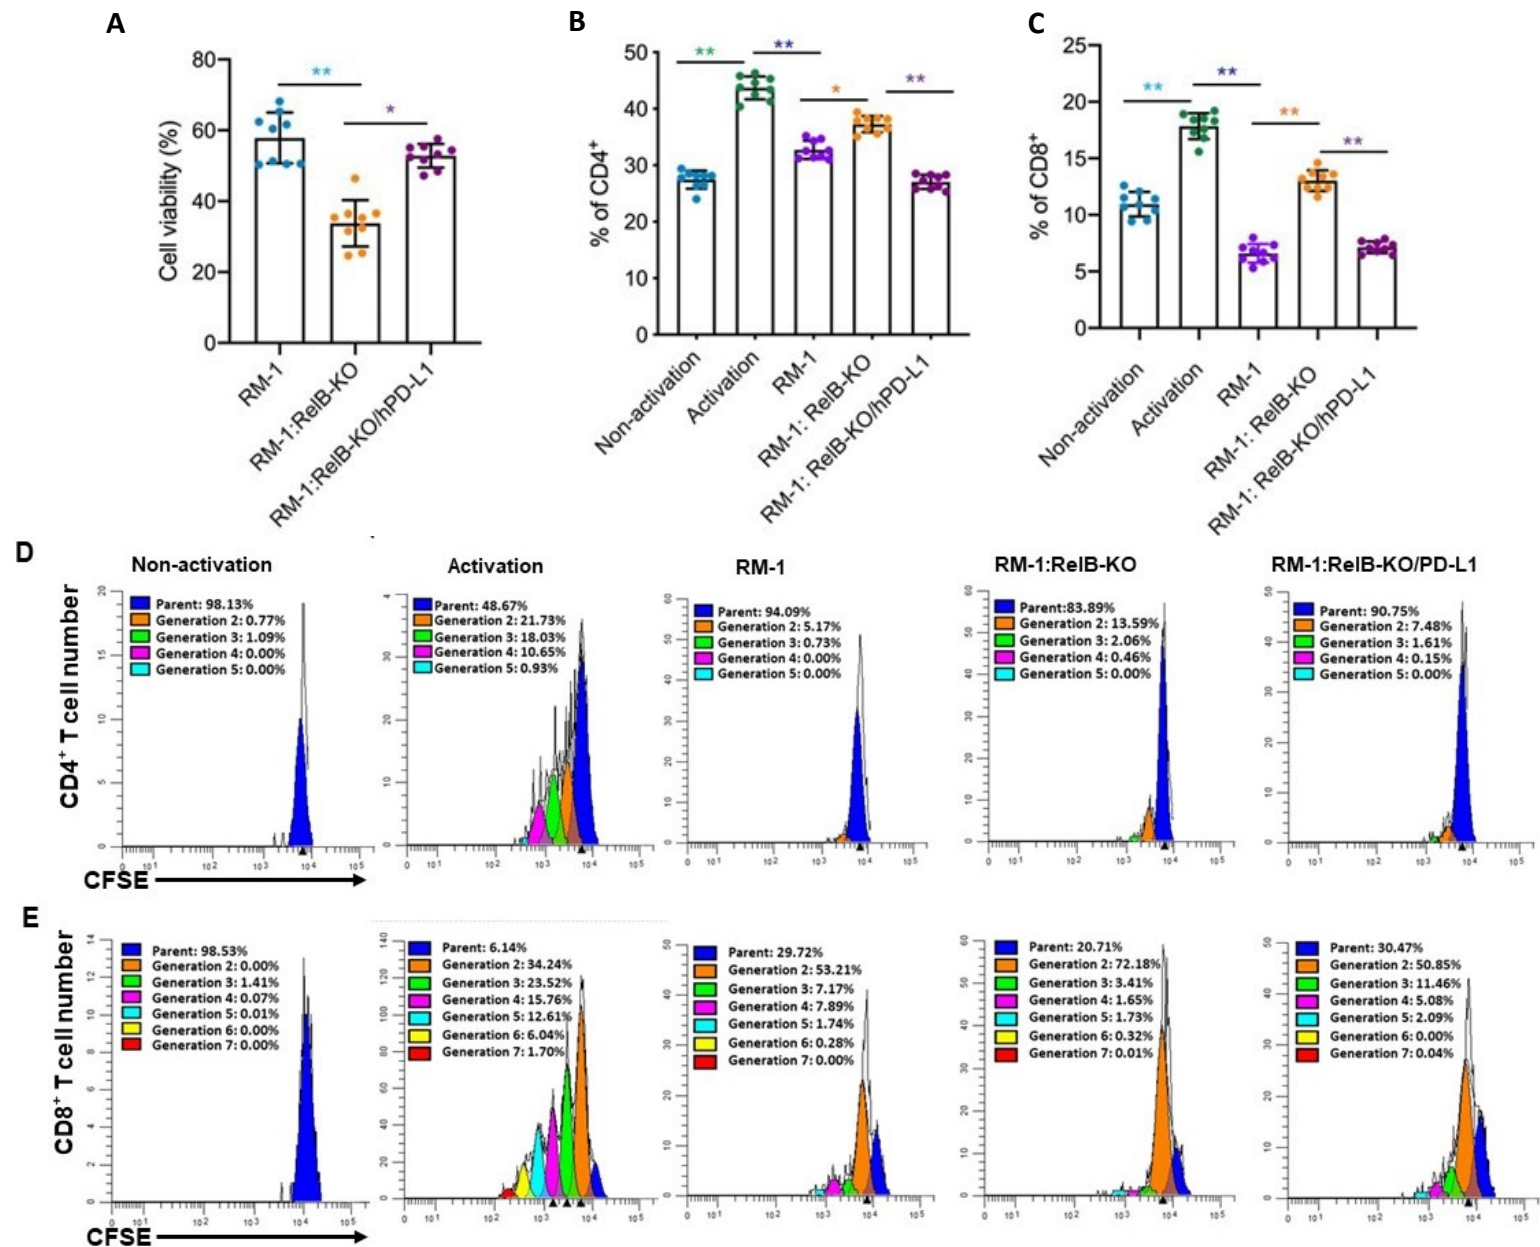

Fig. S6. Enhancement of CD4⁺ and CD8⁺ cells by knockout of RelB in RM-1 cells. **a** Activated mouse T cells were cocultured with RM-1 cell lines in which RelB and PD-L1 were manipulated. T-cell induced cytotoxicity in RM-1 cell lines was determined by MTT assay. **b-c** The effects of RM-1 cell lines on numbers of CD4⁺ and CD8⁺ cells were quantified by flow cytometry. **d-e** The proliferation of CD4⁺ and CD8⁺ cells was further analysed by flow cytometry. *($p < 0.05$) and **($p < 0.01$) show significance between the two groups as indicated.
