

1 **Supplemental Movie 1**

- 2 Representative time-lapse images showing the rolling and arrest of bone marrow monocytes
3 from wild-type and CFTR Δ F508 mice on P-selectin/ICAM-1 after CCL2 infusion. Bone marrow
4 cells were labeled with CD115 and Ly6G to distinguish monocytes and neutrophils, respectively.
5 Ly6G fluorescence was subtracted from the CD115 fluorescence to remove neutrophils.
