Abbreviations: NHS: Nurses' Health Study, HPFS: Health Professionals Follow-Up Study, BMI: body mass index, HDL: high-density lipoprotein, IQR: interquartile range, LDL: low-density lipoprotein, TG: triglycerides

*Race was not assessed in NHS until the 2004 questionnaire, and is presented here for all participants who survived to complete the 2004 questionnaire.

[^]Although not assessed explicitly in NHS and HPFS, all participants in the cohorts had at least some college education, and are indicated as such in the table.

[†]Variable was not assessed in the NHS.

Supplementary Table 2. Risk of glioma in the UK Biobank and Nurses' Health Study/Health Professionals Follow-Up Study by baseline cholesterol concentrations by sex.

*Quartiles for each cholesterol measure were computed using the distribution of values among participants in the UK Biobank.

[^]Cases may not sum to total due to missing cholesterol values.

†Adjusted for age, race (White vs. non-White), education (secondary school vs. vocational training vs. some college vs. completed college vs. none of the above), history of diabetes (yes vs. no), history of hypertension (yes vs. no), BMI ($\leq 25 \text{ kg/m}^2$ vs. $25\text{-}30 \text{ kg/m}^2$ vs. $\geq 30 \text{ kg/m}^2$), smoking status (never vs. past vs. current), and statin use (current use vs. no current use).

‡Adjusted for hypertension (yes vs. no), diabetes (yes vs. no), BMI (continuous), and smoking status (never vs. past vs. current).

**Matched on age, cohort, fasting status, month of sample collection, and ethnic background.

%Adjusted for history of hypertension (yes vs. no), history of diabetes (yes vs. no), statin use (current use vs. no current use), BMI (continuous), and smoking status (never vs. past vs. current).

Abbreviations: BMI: body mass index, CI: confidence interval, HDL-C: high-density lipoprotein cholesterol, HR: hazard ratio, LDL-C: low-density lipoprotein cholesterol, MV: multivariable, OR: odds ratio, TC: total cholesterol, TG: triglycerides

^Cases may not sum to total due to missing cholesterol values.

†Adjusted for age, sex (male vs. female), race (White vs. non-White), education (secondary school vs. vocational training vs. some college vs. completed college vs. none of the above), history of hypertension (yes vs. no), history of diabetes (yes vs. no), BMI ($\leq 25 \text{ kg/m}^2$ vs. $25\text{-}30 \text{ kg/m}^2$ vs. $\geq 30 \text{ kg/m}^2$), smoking status (never vs. past vs. current), and statin use (current use vs. no current use).

‡Adjusted for age, sex (male vs. female), race (White vs. non-White), education (secondary school vs. vocational training vs. some college vs. completed college vs. none of the above), history of hypertension (yes vs. no), history of diabetes (yes vs. no), BMI ($\leq 25 \text{ kg/m}^2$ vs. $25\text{-}30 \text{ kg/m}^2$ vs. $\geq 30 \text{ kg/m}^2$), and smoking status (never vs. past vs. current).

Abbreviations: BMI: body mass index, CI: confidence interval, HDL-C: high-density lipoprotein cholesterol, HR: hazard ratio, LDL-C: low-density lipoprotein cholesterol, MV: multivariable, TC: total cholesterol, TG: triglycerides

Supplementary Table 6. Risk of glioma in the UK Biobank by baseline statin use, age and multivariable adjusted.

	Category	Cases*	HR^	95%CI	MV HR†	95%CI
Total						
Statin use	No current use	389	Ref.		Ref.	
	Current use	101	1.00	0.79-1.25	1.04	0.81-1.33
Statin use with four year lag	No current use	191	Ref.		Ref.	
	Current use	47	0.96	0.69-1.33	1.05	0.73-1.50
Male						
Statin use	No current use	229	Ref.		Ref.	
	Current use	73	0.98	0.75-1.28	0.97	0.72-1.31
Statin use with four year lag	No current use	112	Ref.		Ref.	
	Current use	34	0.96	0.64-1.42	1.00	0.64-1.54
Female						
Statin use	No current use	160	Ref.		Ref.	
	Current use	28	1.04	0.69-1.57	1.25	0.80-1.95
Statin use with four year lag	No current use	79	Ref.		Ref.	
	Current use	13	0.97	0.53-1.76	1.20	0.63-2.29
GBM						
Statin use	No current use	289	Ref.		Ref.	
	Current use	77	1.01	0.78-1.31	1.03	0.77-1.38
Statin use with four year lag	No current use	143	Ref.		Ref.	
	Current use	35	1.00	0.68-1.47	1.16	0.73-1.83
Non-GBM						
Statin use	No current use	100	Ref.		Ref.	
	Current use	24	1.01	0.64-1.59	0.83	0.49-1.41
Statin use with four year lag	No current use	48	Ref.		Ref.	
	Current use	12	1.02	0.53-1.94	1.02	0.46-2.27

*Cases may not sum to total due to missing statin use values.

^Adjusted for age and sex (male vs. female)

†Additionally adjusted for race (White vs. non-White), education (secondary school vs. vocational training vs. some college vs. completed college vs. none of the above), diabetes (yes vs. no), hypertension (yes vs. no), BMI ($\leq 25 \text{ kg/m}^2$ vs. $25\text{-}30 \text{ kg/m}^2$ vs. $\geq 30 \text{ kg/m}^2$), and smoking status (never vs. past vs. current).

Abbreviations: BMI: body mass index, CI, confidence interval, GBM: glioblastoma, HR: hazard ratio, MV: multivariable
