**Supplementary material**

Supplementary figure 1. Histogram of change in headache related sick leave days (A), all-cause sick leave days (B), and headache related visits (C), and all-cause visits (D) in erenumab treatment responders at 12 months pre (white) and post (grey) index. The number of days has been categorized to 0 [0]; 1 to 5 [1-5]; over 6 to 10 [6-10]; and over 10 [ $>10$ ]. The Chi-squared test was used to test for changes in the number of patients in groups between pre and post index.
