^aAdjusted for age (months), calendar year, smoking status (never vs. past vs. current), BMI (<25 kg/m² vs. ≥25-<30 kg/m² vs. ≥30 kg/m²), and total caloric intake (quintiles). Each beverage is also mutually adjusted for the others (e.g., beer adjusted for red and white wine and liquor).

^bCalculated by fixed effect meta-analysis of all three cohorts.

Abbreviations: BMI, body mass index; CI, confidence interval; HPFS, Health Professionals Follow-Up Study; HR, hazard ratio; MV, multivariable; NHS, Nurses' Health Study; NHSII, Nurses' Health Study II
