Reporting Summary

Nature Research wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Research policies, see our <u>Editorial Policies</u> and the <u>Editorial Policy Checklist</u>.

<u> </u>				
S †	· a:	tic	ŤΙ	\sim

Fora	all statistical ar	nalyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.		
n/a	Confirmed			
\boxtimes	The exact	sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement		
\boxtimes	A stateme	ent on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly		
\boxtimes	The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.			
\boxtimes	A description of all covariates tested			
\boxtimes	A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons			
\boxtimes	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)			
\boxtimes	For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i>) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted <i>Give P values as exact values whenever suitable.</i>			
\boxtimes	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings			
\boxtimes	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes			
Estimates of effect sizes (e.g. Cohen's <i>d</i> , Pearson's <i>r</i>), indicating how they were calculated				
Our web collection on <u>statistics for biologists</u> contains articles on many of the points above.				
Software and code				
Policy information about <u>availability of computer code</u>				
Da	ta collection	Microsoft Excel was used for data extraction.		
Da	ita analysis	n/a		
		g custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and encourage code deposition in a community repository (e.g. GitHub). See the Nature Research guidelines for submitting code & software for further information.		

Data

Policy information about <u>availability of data</u>

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A list of figures that have associated raw data
- A description of any restrictions on data availability

The data summarized in the manuscript were identified from published clinical practice guidelines and extracted into an extraction template built into Microsoft Excel. Data from the extraction file are available upon request.

Field-specific reporting					
Please select the one below th	nat is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

,	stematic literature review of clinical practice guidelines for pharmacological treatment of schizophrenia with antipsychotics in the ute and maintenance phases.				
Research sample Pu	Published clinical practice guidelines.				
Sampling strategy	n/a				
sci re en	Information on the recommendations regarding the antipsychotic management in the acute and maintenance phases of schizophrenia and related benefits and harms was captured from the clinical practice guidelines (CPG) identified by the systematic review. Each guideline was reviewed and extracted by a single researcher and the data were validated by a senior team member to ensure accuracy and completeness. Additionally, each included CPG was assessed using the Appraisal of Guidelines for Research and Evaluation II (AGREE II) tool. Following extraction and validation, results were qualitatively summarized across CPGs.				
Timing	Guidlines published between January 1, 2004 and June 2020 were eligible for inclusion.				
Data exclusions	None				
Non-participation n/	ia/				
Randomization n/	n/a				
We require information from auth	specific materials, systems and methods nors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material,				
	It to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.
