

Original agarose gel picture

Original agarose gel picture demonstrating the electrophoresis results of the amplicons derived from nested 5' RACE and the housekeeping gene amplification. **A.** Electrophoresis of nested 5' RACE amplicons corresponding to the 5' UTR of the human *BCL2L12* gene, using the three distinct TSOs described in the present study. Each TSO was incorporated both in a typical 1-step and a custom designed 2-step RT reactions before the implementation of the nested 5' RACE. **B.** Electrophoresis of the amplicons corresponding to the *GAPDH* mRNA amplification, which was used as housekeeping for the present work.
