

Depth of Anchoring

Table A. Anchoring depth of Li_αIA1, Ll_αIII1 and R44Y/S60Y St_βIB1 on a pure POPC bilayer. The depth represents the distance between the C-alpha atom of each residue and the upper phosphate plane. R1 and R2 stand for replica 1 and replica 2. Only residues with a relevant anchoring depth are indicated in this table.

Table B. Anchoring depth of Li_αIA1 and LI_αIII1 on a POPC:PSM:CHOL (70:20:10) bilayer. The depth represents the distance between the C-alpha atom of each residue and the upper phosphate plane. R1 and R2 stand for replica 1 and replica 2. Only residues with a relevant anchoring depth are indicated in this table.
