

Title: Supplementary Data 1.

Description: A table containing information about the blaNDM positive contigs analysed in this work. This includes corresponding sample accession numbers and other relevant information: instrument, organism, collection date, sampling location, sampling source, identified plasmid types and plasmid cluster, length, and GC content.

Title: Supplementary Data 2.

Description: A table containing information about the dataset of complete plasmid reference sequences. This includes accession numbers of complete plasmids, description, plasmid cluster, length, organism, collection date, isolation source and sampling location.

Title: Supplementary Data 3.

Description: XML configuration files used in BEAST2 molecular dating analysis.
