

**Figure S3. Rescue of poly(I:C) induced cytokine release.** pHCE cells were stimulated with poly(I:C) and bortezomib (10  $\mu$ M) or Z-VAD-FMK (100  $\mu$ M) for 6 h. Cytokine release was evaluated by ELISA. Data are mean  $\pm$  SEM from  $n = 3$  biological replicates from one donor. \*\*\*\* $P < 0.0001$ , *ns* = not significant by one-way ANOVA with Dunnett multiple comparison correction. BORT = bortezomib; ZVAD = Z-VAD-FMK.
