FigS1. The maximum likelihood phylogenetic tree of HIV subtype B *pol* sequences

The trees were constructed from nucleotide sequences corresponding to HXB2 nucleotide 2273 to 3276 using the GTR+CAT nucleotide substitution model in FastTree package. BHLN in blue indicate that the sequence is from Beijing HIV laboratory network(BHLN). LANL in red indicate that the sequence is Los Alamos HIV sequence database (LANL). A distance scale is shown at the bottom of the tree.

FigS2. The maximum likelihood phylogenetic tree of HIV CRF01\_AE *pol* sequences

The trees were constructed from nucleotide sequences corresponding to HXB2 nucleotide 2273 to 3276 using the GTR+CAT nucleotide substitution model in FastTree package. BHLN in blue indicate that the sequence is from Beijing HIV laboratory network(BHLN). LANL in red indicate that the sequence is Los Alamos HIV sequence database (LANL). A distance scale is shown at the bottom of the tree.

FigS3. The maximum likelihood phylogenetic tree of HIV CRF07\_BC *pol* sequences

The trees were constructed from nucleotide sequences corresponding to HXB2 nucleotide 2273 to 3276 using the GTR+CAT nucleotide substitution model in FastTree package. BHLN in blue indicate that the sequence is from Beijing HIV laboratory network(BHLN). LANL in red indicate that the sequence is Los Alamos HIV sequence database (LANL). A distance scale is shown at the bottom of the tree.
