

Supplementary Figure S1: CD105 expression on primary CLL cells assessed by indirect and direct flow cytometric staining

A CD105 expression on primary CLL cells stained with the directly labeled anti-CD105-APC antibody (top) (Biolegend, clone 43A3, Cat: 323208) compared to anti-CD105 antibody K-ro23 (bottom). **B+C** Four different primary CLL samples were analyzed for CD105 expression before freezing and after thawing. CD105 positivity and SFI levels were defined according to the FMO, respectively 2nd mAb controls.
