

Figure S6. Antibodies Ab874_{NHP} and Ab1170_{NHP} interact with the N332_{gp120} glycan. Antibodies (A) Ab874_{NHP} and (B) Ab1170_{NHP} elicited in NHPs after priming with RC1-4fill-VLPs (115) contact the high-mannose N-glycan attached to gp120 residue N332 (modeled from PDB 6ORO) (Ab874_{NHP}) and this study (Ab1170_{NHP}). Cryo-EM density for the N332_{gp120} glycan is shown as blue mesh contoured at 4σ.
