ISH, isolated systolic hypertension; AUC, area under the receiver-operating characteristic curve; C.I., confidence interval; BMI, body mass index; WC, waist circumference; WHR, waist to hip ratio; WHtR, waist to height ratio; VAI, visceral adiposity index; LAP, lipid accumulation product index; CMI, cardiometabolic index.

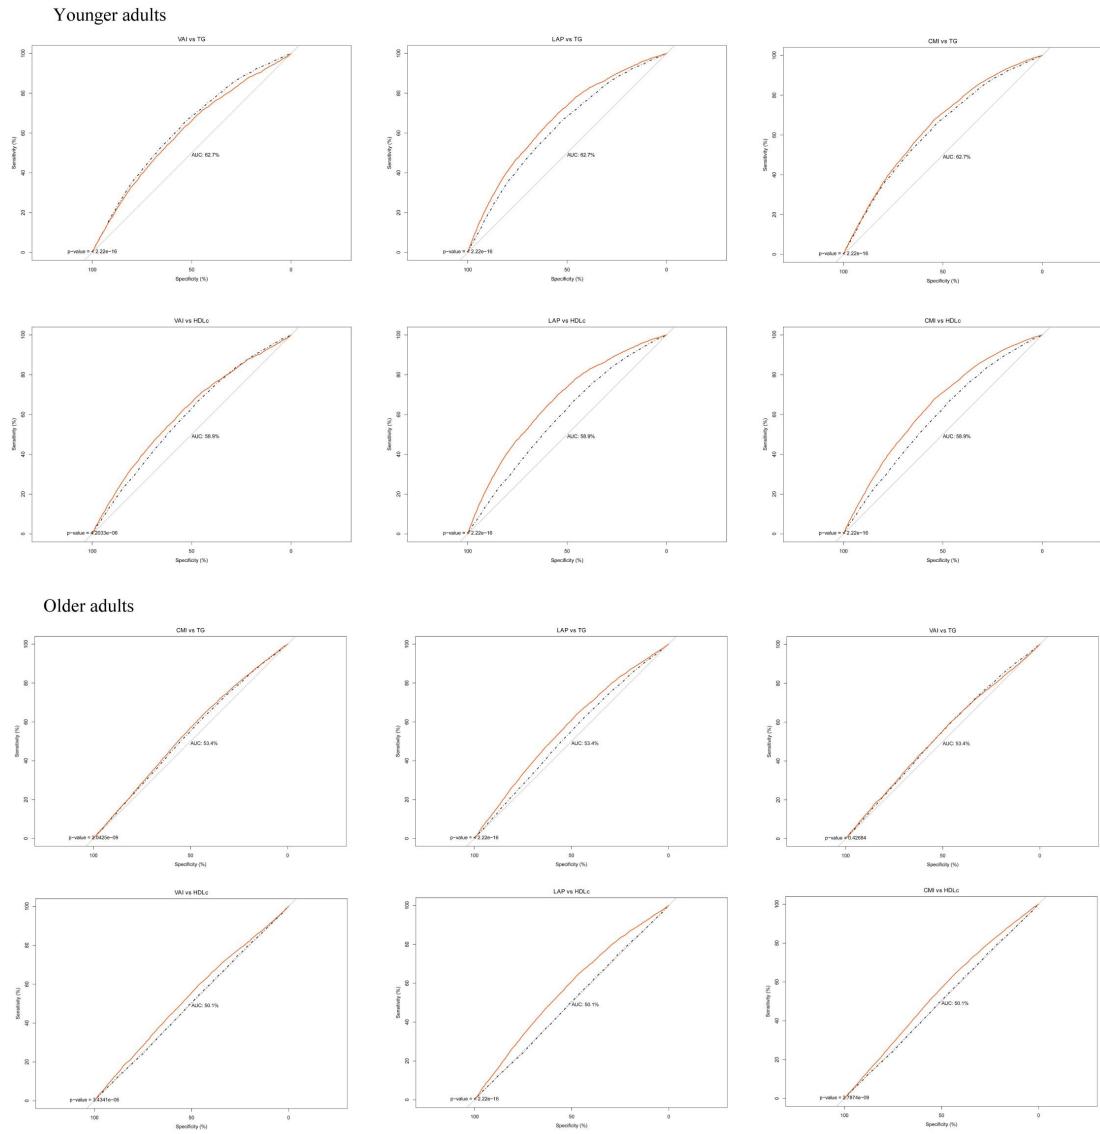

S Figure 1. Correlation matrix diagram between variables.

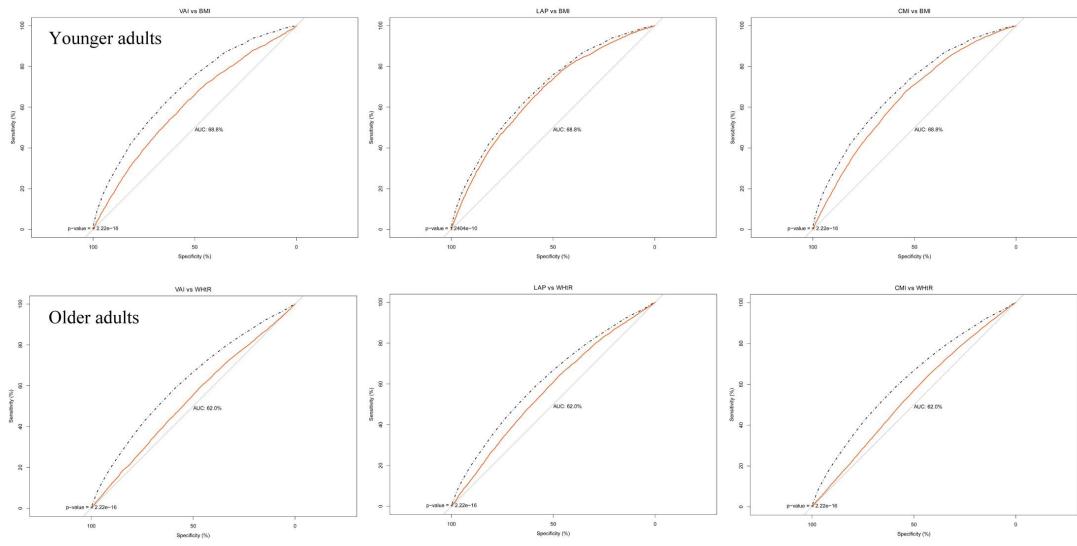

The lower left corner is the density map between the variables, the diagonal line is the distribution curve of the variables, and in the upper right corner is the correlation coefficient between the variables. SBP, systolic blood pressure; DBP, diastolic blood pressure; TG, triglyceride; HDLc, high-density lipoprotein cholesterol; BMI, body mass index; WC, waist circumference; WHR, waist-to-hip ratio; WHtR, waist-to-height ratio; VAI, visceral adiposity index; LAP, lipid accumulation product index; CMI, cardiometabolic index.

S Figure 2. The proportion of ISH by categories of obesity indicators in different age groups. The subjects were classified into tertiles (T) according to each obesity indicator and lipid parameter: T1, the lowest tertile; T2, second tertile; T3, the highest tertile. ISH, isolated systolic hypertension; BMI, body mass index; WC, waist circumference; WHR, waist-to-hip ratio; WHtR, waist-to-height ratio; VAI, visceral adiposity index; LAP, lipid accumulation product index; CMI, cardiometabolic index; TG, triglyceride; HDLc, high-density lipoprotein cholesterol.

S Figure 3. Receiver operating characteristic (ROC) curves of lipid-related obesity indicators, TG, and HDLc to identify isolated systolic hypertension. The dotted line is the ROC curve of TG or HDLc, and their AUCs are marked next to the diagonal line. The solid red line is the ROC curve of the lipid-related obesity indicator, and in the lower left corner is the *p value* of the comparisons of their AUCs. VAI, visceral adiposity index; LAP, lipid accumulation product index; CMI, cardiometabolic index; TG, triglyceride; HDLc, high-density lipoprotein cholesterol.

S Figure 4. Receiver operating characteristic (ROC) curves of lipid-related obesity indicators and typical traditional obesity indicators to identify isolated systolic hypertension. The dotted line is the ROC curve of the traditional obesity indicators with the highest AUC in each age group (BMI in younger adults and WHtR in older adults), and their AUCs are marked next to the diagonal line. The solid red line is the ROC curve of the lipid-related obesity indicators, and in the lower left corner is the *p value* of the comparisons of their AUCs. BMI, body mass index; WHtR, waist-to-height ratio; VAI, visceral adiposity index; LAP, lipid accumulation product index; CMI, cardiometabolic index.
