^aQuintile boundaries are based on the primary analysis. LA measures were imputed for 850 participants. Incidence rates are unadjusted.

Abbreviations: ARIC = Atherosclerosis Risk in Communities; MICE = multiple imputation by chain equations; LA = left atrial; PY = person-years; APOE = apolipoprotein E

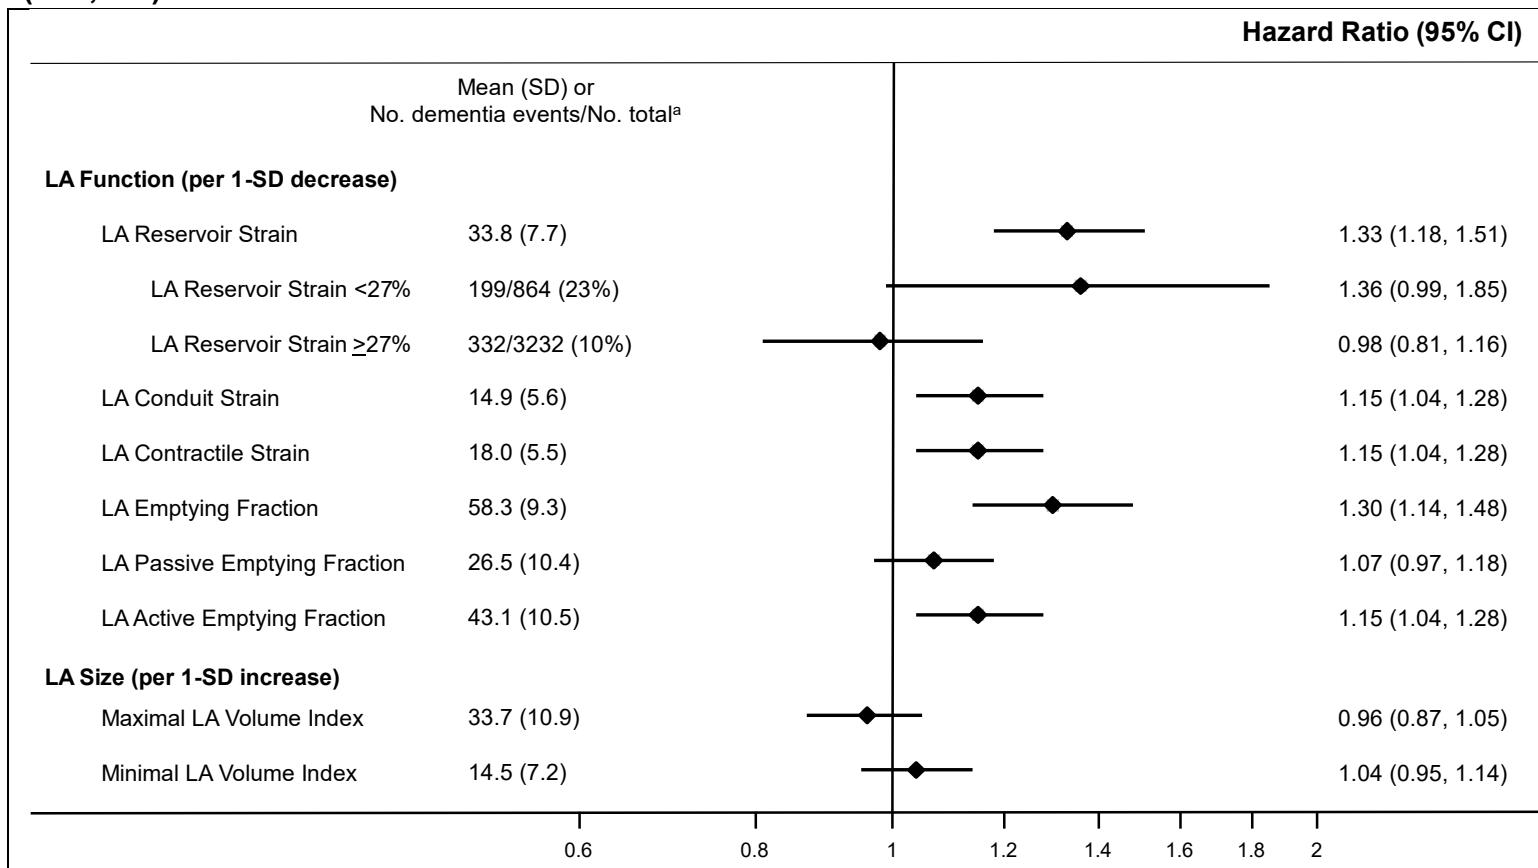

eFigure 1. Directed Acyclic Graph

eFigure 1 illustrates the hypothesized associations among left atrial (LA) measures, dementia, atrial fibrillation (AF), and confounders. Specifically, in addition to AF mediating part of the association between LA measures and dementia, LA measures are also associated with dementia via a pathway that is independent of AF.

^a Confounders include age, sex, race/center, education, body mass index, smoking status, diabetes, systolic blood pressure, antihypertensive medications, coronary heart disease, heart failure

eFigure 2. Association of Left Atrial Measures with Incident Dementia: The ARIC Study, 2011-2019 (n=4,096)

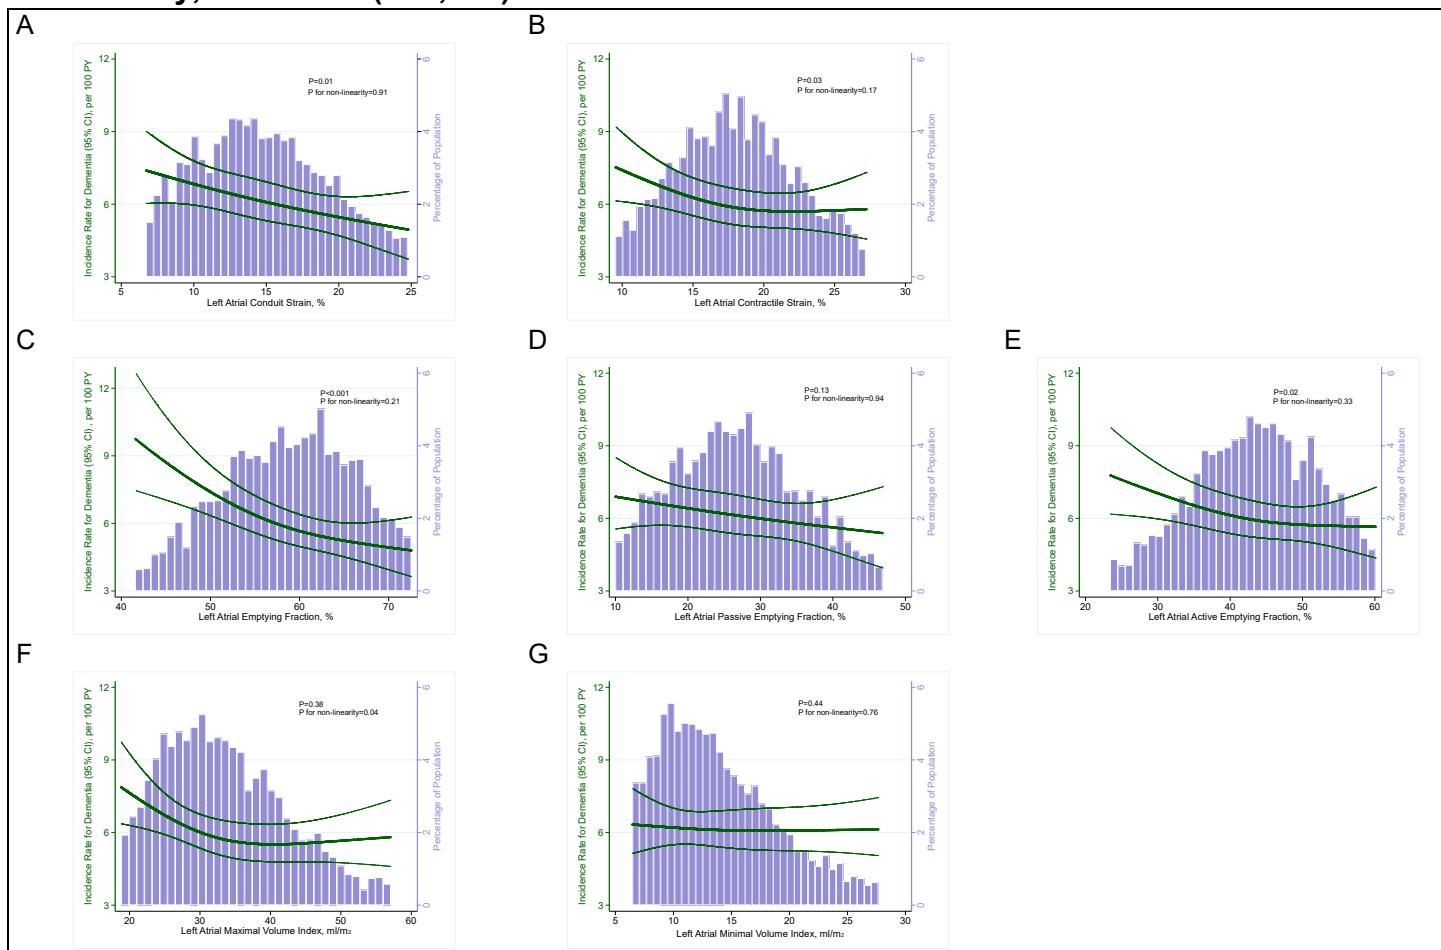

eFigure 2 depicts the association of left atrial measures (per 1-SD decrease or increase) and incident dementia. For continuous LA measures, hazard ratios are per 1-SD decrease or increase in LA measure. For example, each 1-SD decrease in LA conduit strain was associated with an increased risk of dementia (hazard ratio (95% CI): 1.15 (1.04, 1.28).

Adjusted for age, sex, race/center, APOE ε4, education, body mass index, smoking status, diabetes, systolic blood pressure, antihypertensive medications, coronary heart disease, heart failure, anticoagulant use, incident stroke, incident atrial fibrillation, LAVI_{min} (for LA function measures only), left ventricular ejection fraction, left ventricular mass index

^a Data presented as mean (SD) for continuous variables and number of dementia events/total (%) for categorical variables. Units for LA function measures are %; units for LA size measures are ml/m².

Abbreviations: ARIC = Atherosclerosis Risk in Communities; LA = left atrial; SD = standard deviation; CI = confidence interval

eFigure 3. Restricted Cubic Splines Plotting Dementia Incidence by Left Atrial Measures: The ARIC Study, 2011-2019 (n=4,096)

eFigure 3 depicts the association between LA measures and dementia incidence. *P* values are shown to indicate whether associations are significant and whether they are non-linear.

A: LA conduit strain; B: LA contractile strain; C: LA emptying fraction; D: LA passive emptying fraction; E: LA active emptying fraction; F: LA maximal volume index; G: LA minimal volume index
