

Supplementary Figure 2. The effect of α CD47-G1 on the expression of the genes marking macrophage polarization *in vitro*. Primary human macrophages were cocultured with A2780 cells at a ratio of 1:1 with or without α CD47-G1 or α CD47-G4 for 6 hours, followed by gene transcript quantification by RT-qPCR. Statistical analyses were performed by one-way ANOVA with P values corrected for multiple comparisons by Bonferroni method (n = 3 donors). **P \leq 0.01. Data were presented as mean values \pm SD.
