

Figure S4

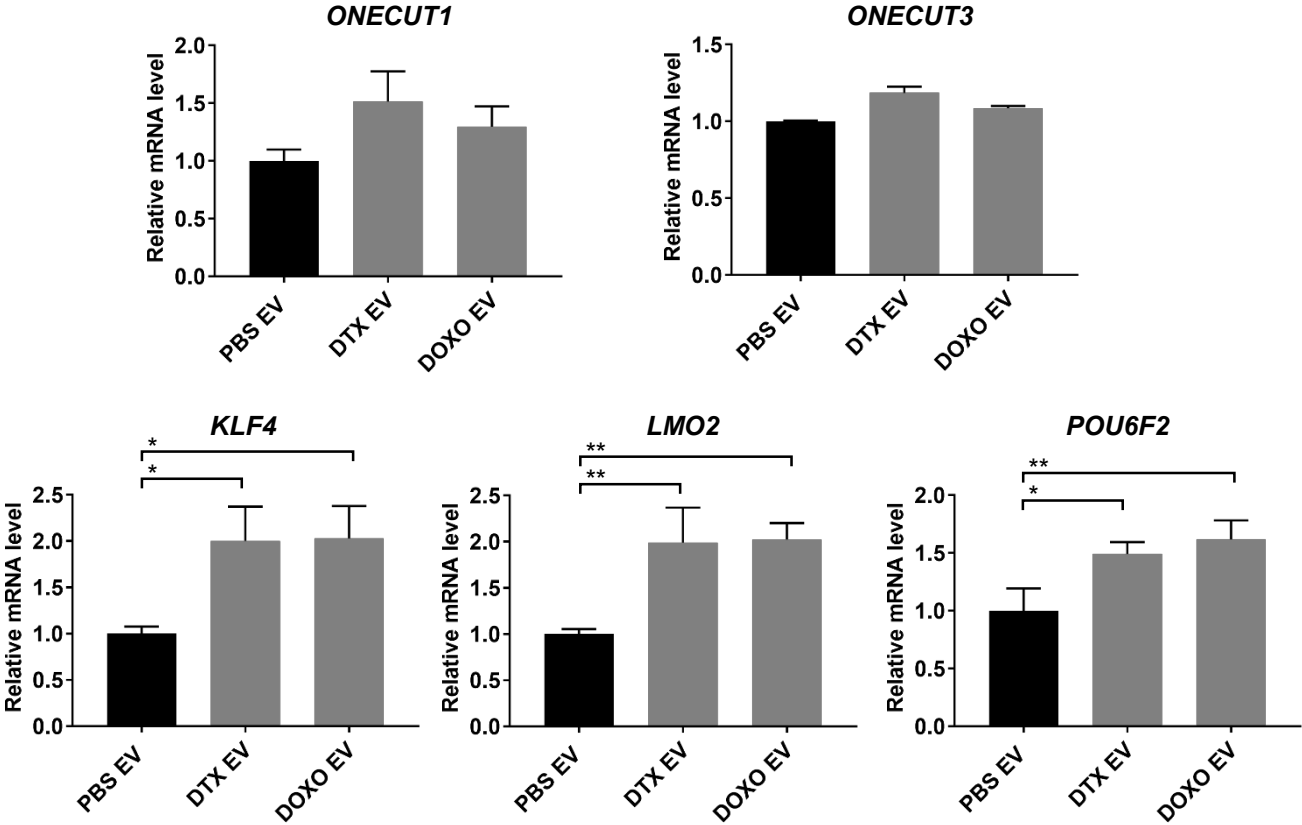

Fig. S4. Effect of chemo-EVs on other ONECUT family members and ONECUT2 target genes. MDA231 cells were treated with an equal amount of EVs from MDA231 cells that had been exposed to PBS, DTX (4 nM), or DOXO (125 nM) for 48 h before EV collection. EV-treated MDA231 cells were analyzed at 48 h by RT-qPCR for levels of indicated genes using 18S rRNA level for normalization. *P<0.05, **P<0.01.
