## Fig. S9

## Fig. S9. Expression of Nr2f2-CrexER in mouse embryos.

**a-c**, Representative immunostaining on cross sections (E8.0-E9.0) and sagittal sections (E9.5) of Nr2f2-CrexER and Nr2f2-CrexER;Dll4-tdTomato embryos as indicated. At E8.0 (a), expression of ER was not detected in the VECs, in contrast to that of Nrp2 (arrows). From E8.5 to E9.5 (b-c), endothelial expression of ER (arrows) is complementary to that of Dll4-tdTom (arrowheads), in line with the presumed endogenous vascular Nr2f2 expression. Images to the right show inserts at high magnification. The diagrams to the left indicate the positions of sections and imaging. nt, neural tube; DA, dorsal aorta; ICA, internal carotid artery; ISA, intersegmental artery; ACV, anterior cardinal vein. Scale bars, 100  $\mu$ m.
