

Exploring the causal roles of circulating remnant lipid profile on cardiovascular and cerebrovascular diseases: Mendelian randomization study

Running title: Causal effect of remnant lipid profiles on CVD

Authors: Shucheng Si¹, PhD, Lei Hou¹, PhD, Xiaolu Chen¹, MSc, Wenchao Li¹, MSc, Xinhui Liu¹, MSc, Congcong Liu¹, MSc, Yunxia Li¹, MSc, Tonghui Yuan¹, MSc, Jiqing Li¹, PhD, Bojie Wang¹, MSc, Hongkai Li^{1,2}, PhD, Fuzhong Xue^{1,2,3}, PhD

Mark1: ✓ represent consistent results of Removed.all.outliers.OR and Raw.OR

Mark2: ✓ represent consistent results of Removed.candidate.outliers.OR and Raw.OR

Mark3: ✓ represent consistent results of Adjusted.OR and Raw.OR

The consistent results were defined as the same causal directions and significance.

eFigure 1. Causal relationship between main lipoprotein/lipids and CVDs in sensitivity analysis.

Red error bar: significantly positive association.

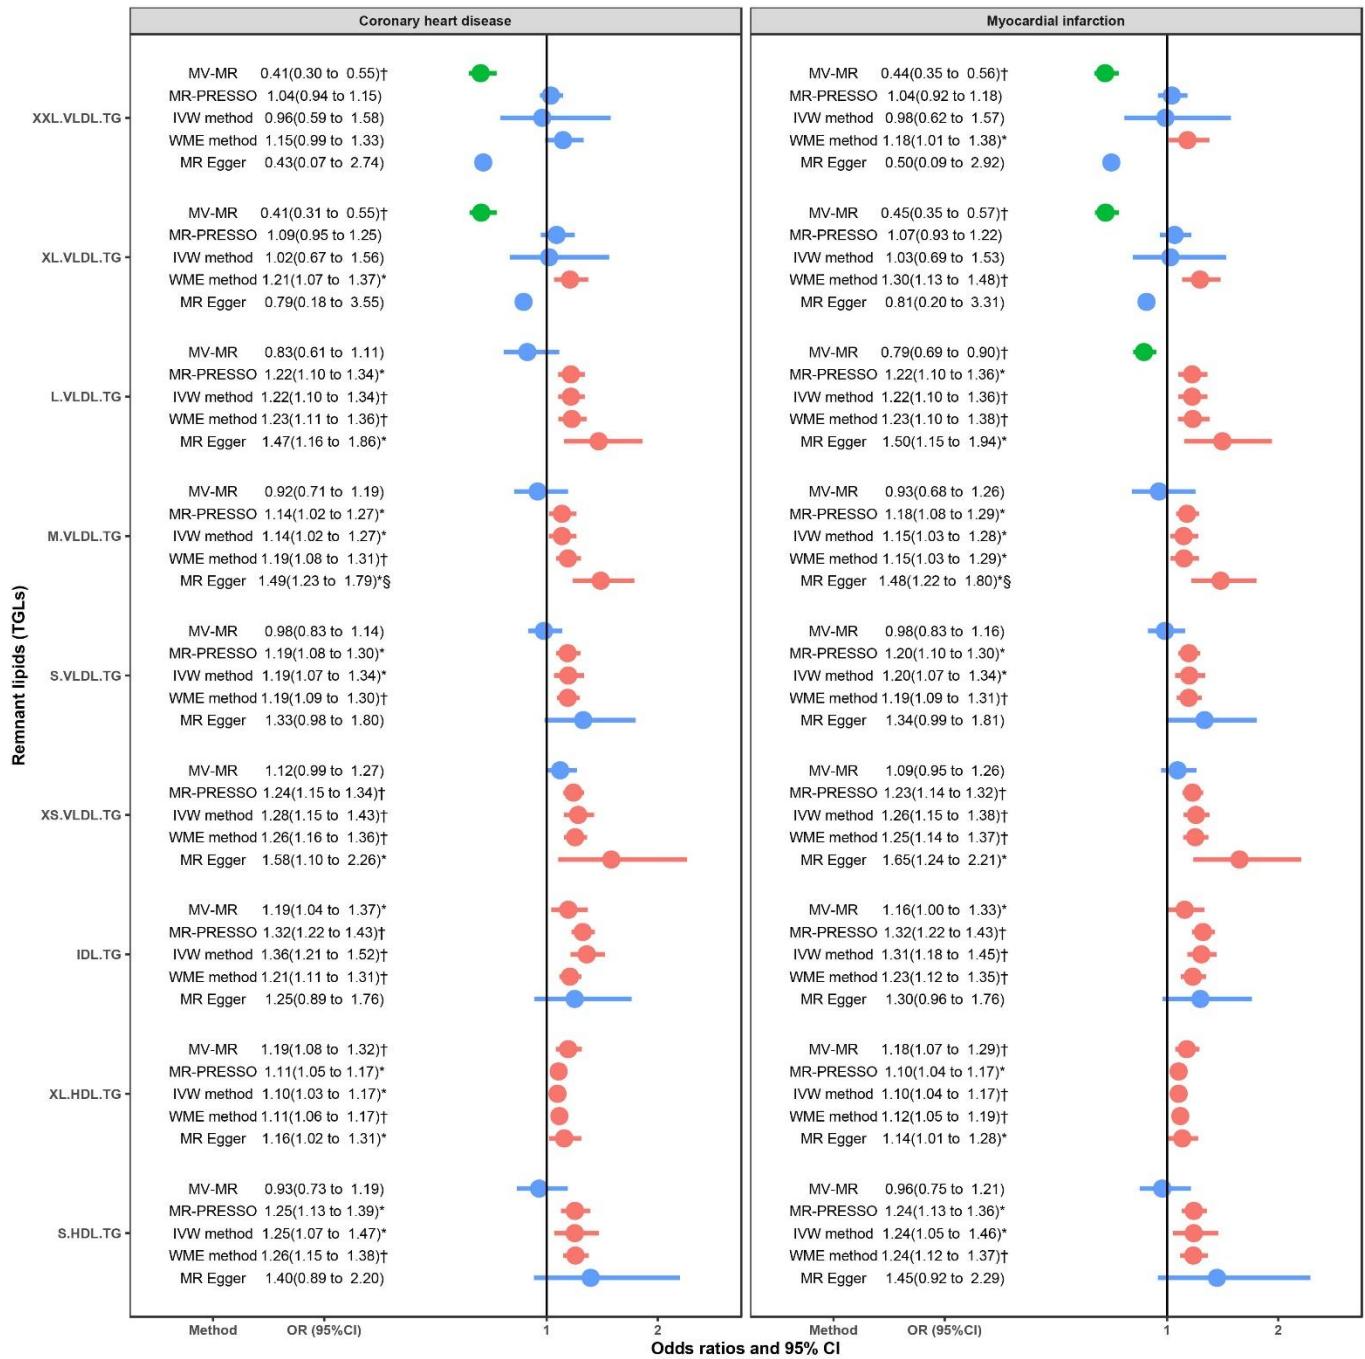

Green error bar: significantly negative association.

Blue error bar: insignificant association.

*: P<0.05.

†: Significant result after Bonferroni correction.

§: Results with potential horizontal pleiotropic tested by MR-Egger method.

eFigure 2. Causal relationship between circulating remnant lipids and CHD and MI in sensitivity analysis.

Red error bar: significantly positive association.

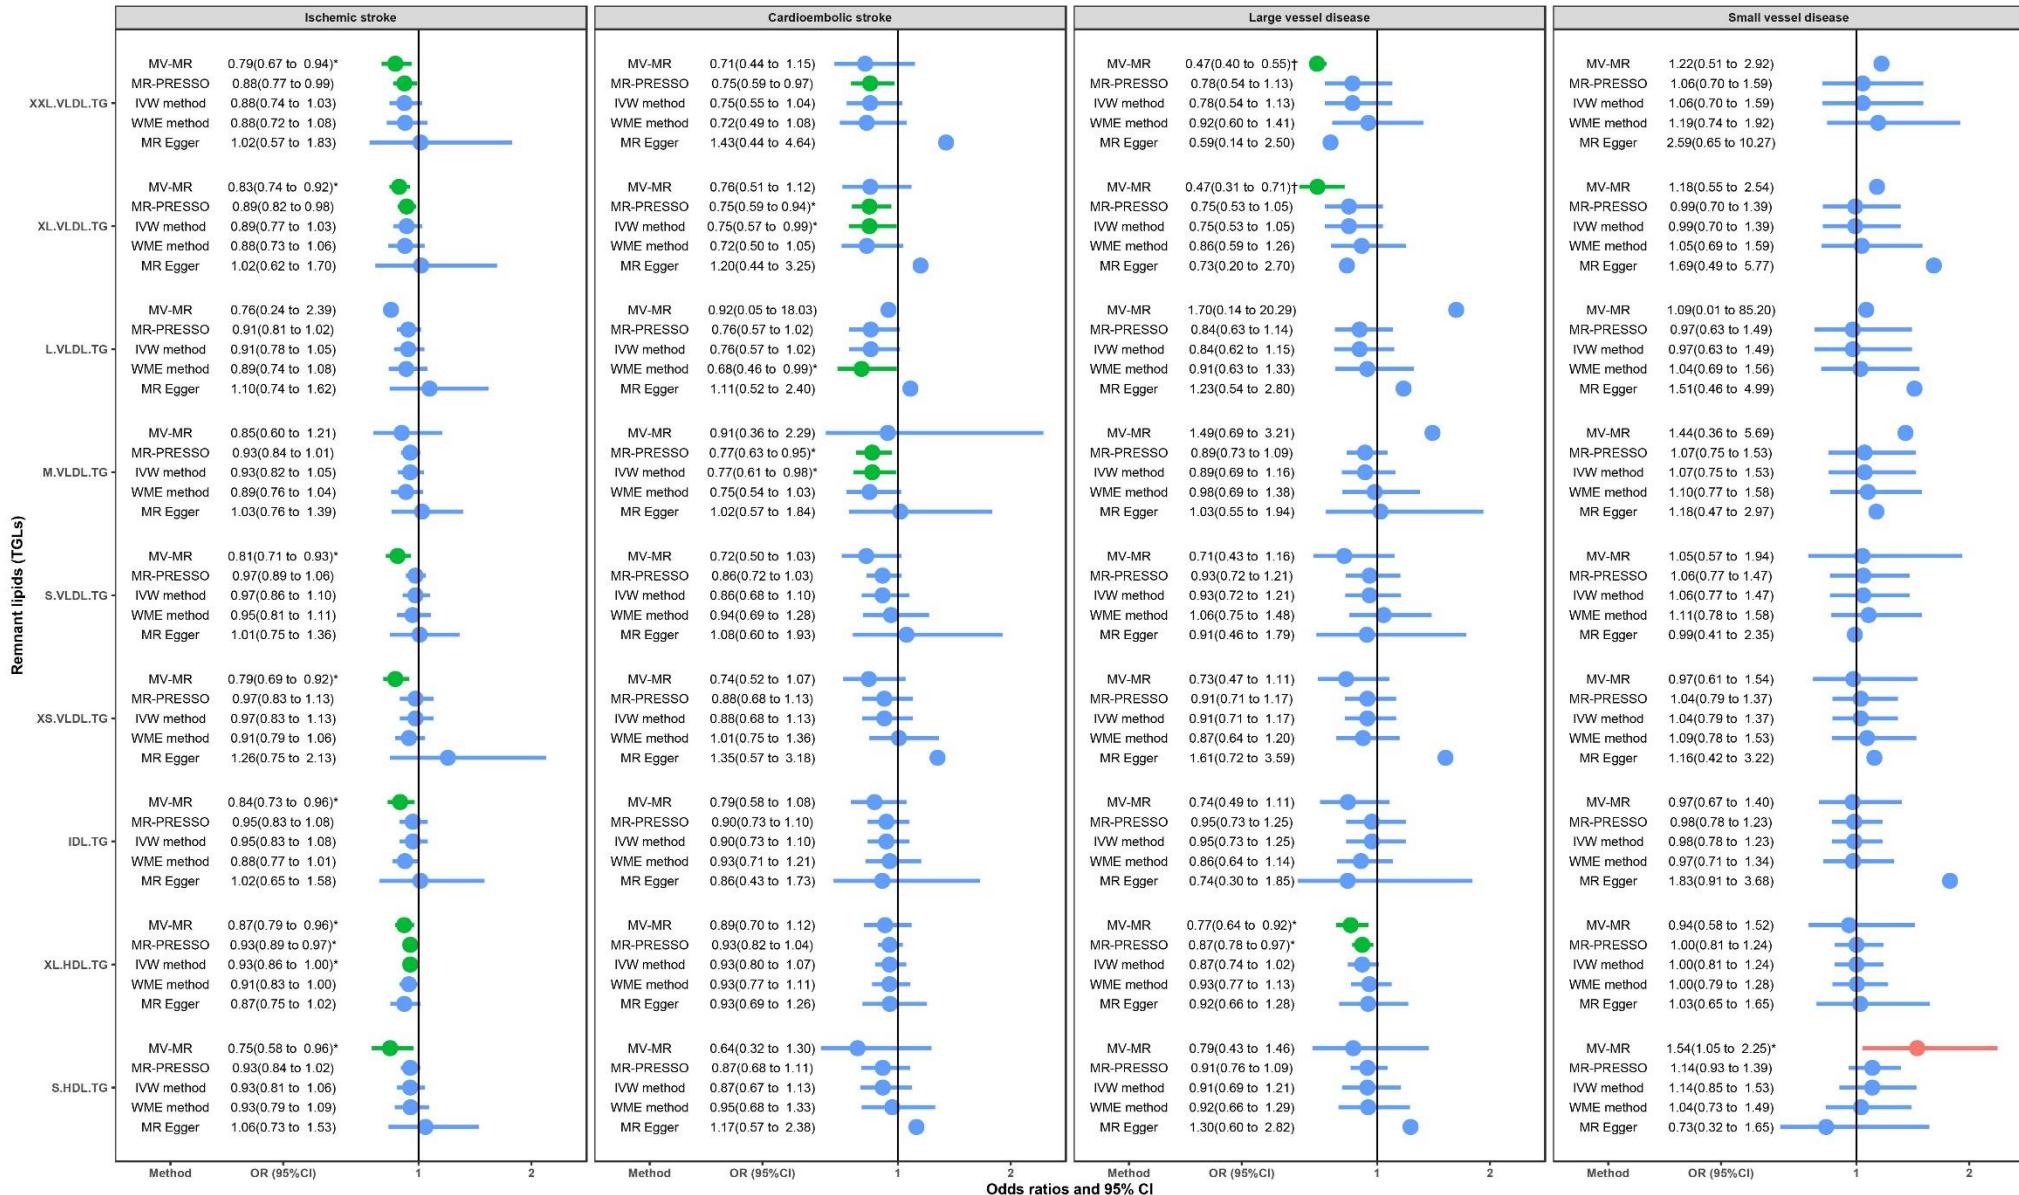

Green error bar: significantly negative association.

Blue error bar: insignificant association.

*: P<0.05.

†: Significant result after Bonferroni correction.

§: Results with potential horizontal pleiotropic tested by MR-Egger method.

eFigure 3. Causal relationship between circulating remnant lipids and IS and subtypes in sensitivity analysis.

Red error bar: significantly positive association.

Green error bar: significantly negative association.

Blue error bar: insignificant association.

*: P<0.05.

†: Significant result after Bonferroni correction.

§: Results with potential horizontal pleiotropic tested by MR-Egger method.
