Figure S1. Study design diagram

T2D: type 2 diabetes; ESRD: end-stage renal disease; HIV/AIDS: human immunodeficiency virus/acquired immune deficiency syndrome; Rx: prescription.

[†]Data range: Clininformatics (Apr 2013–Dec 2019) / MarketScan and Medicare (Apr 2013–Dec 2018)

Table S1. Baseline patient characteristics

Category of patient characteristics	Variable(s)
Demographics	Age, sex, geographic region*, Medicare Advantage**, race***
Lifestyle risk factors	Obesity or overweight, smoking
Claims-measured proxies of diabetes severity and duration	Diabetic nephropathy, diabetic neuropathy, diabetic retinopathy
Risk factors for prognosis of diabetes	CVD†, CKD
Other comorbidities	Hyperlipidemia, hypertension, COPD, malignant neoplasm
Physician specialties††	Cardiologist visits, endocrinologist visits, internist visits, nurse practitioner or physician assistant visits
Healthcare utilization as proxy for overall health status and care intensity, and claims-measured proxies of socioeconomic status ¹	Any recent hospitalizations#, average days of hospitalizations, number of ED visits, number of office visits, number of HbA1c test orders, ratio of the number of brand name versus generic drug use##, number of unique medications, copay for pharmacy cost, preventive healthcare service§
Concomitant medications	ACE inhibitors or ARBs Antithrombotic medications Beta blockers Calcium channel blockers Loop diuretics Statin Thiazides
Laboratory results**	HbA1c (%)§§, eGFR (mL/min/1.73m ²)¶, LDL (mg/dl), HDL (mg/dl), total cholesterol (mg/dl), triglyceride (mg/dl)

CVD: cardiovascular disease; CKD: chronic kidney disease; COPD: chronic obstructive pulmonary disease; ED: emergency department; HbA1c: hemoglobin A1c; ACE inhibitors: Angiotensin-converting enzyme inhibitors; ARBs: Angiotensin II receptor blockers.

* Northeast (CT, MA, ME, NH, NJ, NY, PA, RI, VT)

South (AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV)

Midwest (IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI)

West (AK, AZ, CA, CO, HI, ID, MT, NM, NV, OR, UT, WA, WY)

** Available for Clininformatics and MarketScan databases.

*** Available for Clininformatics and Medicare databases.

† Defined as history of myocardial infarction, stable or unstable angina, other ischemic heart disease, transient ischemic attack, stroke, atherosclerotic peripheral vascular disease, or heart failure.

†† Defined as specialist visits occurred within 7 days prior to cohort entry.

Defined as any hospitalizations occurred within 30 days prior to cohort entry.

Added 1 to both numerator and denominator, then log-transformed.

¶ Defined as administration of bone mineral density test, colonoscopy, fecal occult blood test, mammography, pap smear, prostate-specific antigen (PSA) test, flu vaccine, or pneumococcal vaccine.

§§ Measured 180 days prior to or on cohort entry.

† Estimated using the quadratic GFR equation: $GFR = \exp(1.911 + \frac{5.249}{\text{Serum creatinine}} - \frac{2.114}{\text{Serum creatinine}^2} - 0.00686 * \text{Age} - 0.205 \text{ (if female)})$. If serum creatinine <0.8 mg/dL, use 0.8 for serum creatinine.

* Northeast (CT, MA, ME, NH, NJ, NY, PA, RI, VT)

South (AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV)

Midwest (IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI)

West (AK, AZ, CA, CO, HI, ID, MT, NM, NV, OR, UT, WA, WY)

** Defined as a history of myocardial infarction, stable or unstable angina, other ischemic heart diseases, transient ischemic attack, stroke, atherosclerotic peripheral vascular disease, or heart failure.

† Defined as specialist visits occurred within 7 days prior to cohort entry.

†† Defined as hospitalization occurred within 30 days prior to cohort entry.

Added 1 to both numerator and denominator, then log-transformed.

Defined as administration of bone mineral density (BMD) test, colonoscopy, fecal occult blood test, mammography, pap smear, prostate-specific antigen (PSA) test, flu vaccine, or pneumococcal vaccine.

§ Measured 180 days prior to or on cohort entry.

¶ Estimated using the quadratic GFR equation: $GFR = \exp(1.911 + \frac{5.249}{\text{Serum creatinine}} - \frac{2.114}{\text{Serum creatinine}^2} - 0.00686 * \text{Age} - 0.205 \text{ (if female)})$. If serum creatinine <0.8 mg/dL, use 0.8 for serum creatinine.

SD: standardized difference; std.dev: standard deviation; HbA1c: hemoglobin A1c; CVD: cardiovascular disease; CKD: chronic kidney disease; COPD: chronic obstructive pulmonary disease; ED: emergency department.

* Northeast (CT, MA, ME, NH, NJ, NY, PA, RI, VT)

South (AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV)

Midwest (IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI)

West (AK, AZ, CA, CO, HI, ID, MT, NM, NV, OR, UT, WA, WY)

** Defined as a history of myocardial infarction, stable or unstable angina, other ischemic heart diseases, transient ischemic attack, stroke, atherosclerotic peripheral vascular disease, or heart failure.

† Defined as specialist visits occurred within 7 days prior to cohort entry.

†† Defined as hospitalization occurred within 30 days prior to cohort entry.

Added 1 to both numerator and denominator, then log-transformed.

Defined as administration of bone mineral density (BMD) test, colonoscopy, fecal occult blood test, mammography, pap smear, prostate-specific antigen (PSA) test, flu vaccine, or pneumococcal vaccine.

Table S5. [Sensitivity analysis] Patient characteristics and standardized differences at the time of first-line SGLT-2i and metformin initiation (2013-2019). Values are percentage (%) unless otherwise specified.

	Apr2013-Dec2014			Jan2015-Jun2016			Jul2016-Dec2017			Jan2018-Dec2019			Linear trend (P)

SD: standardized difference; std.dev: standard deviation; HbA1c: hemoglobin A1c; CVD: cardiovascular disease; CKD: chronic kidney disease; COPD: chronic obstructive pulmonary disease; ED: emergency department.

* Northeast (CT, MA, ME, NH, NJ, NY, PA, RI, VT)

South (AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV)

Midwest (IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI)

West (AK, AZ, CA, CO, HI, ID, MT, NM, NV, OR, UT, WA, WY)

** Defined as a history of myocardial infarction, stable or unstable angina, other ischemic heart diseases, transient ischemic attack, stroke, atherosclerotic peripheral vascular disease, or heart failure.

† Defined as specialist visits occurred within 7 days prior to cohort entry.

‡ Defined as hospitalization occurred within 30 days prior to cohort entry.

Added 1 to both numerator and denominator, then log-transformed.

Defined as administration of bone mineral density (BMD) test, colonoscopy, fecal occult blood test, mammography, pap smear, prostate-specific antigen (PSA) test, flu vaccine, or pneumococcal vaccine.

§ Measured 180 days prior to or on cohort entry.

¶ Estimated using the quadratic GFR equation: $GFR = \exp(1.911 + \frac{5.249}{\text{Serum creatinine}} - \frac{2.114}{\text{Serum creatinine}^2} - 0.00686 * \text{Age} - 0.205 \text{ (if female)})$. If serum creatinine <0.8 mg/dL, use 0.8 for serum creatinine.

Figure S2. [Sensitivity analysis] Trends of standardized differences (SDs) of selected patient characteristics, comparing first-line SGLT-2i versus metformin.
