

1
2 **Supplemental Figure 1.** Correlation between time to event (weeks) for the same tumor line
3 transplanted into two mice ($n = 16$). For VAC cycle 2 of therapy, two mice were transplanted
4 with the same line from cycle 1 in case of mortality in cycle 2. The graph shows the EFS for
5 each tumor (designated A or B) for the same model in different mice. Overall, the EFS times are
6 similar for both tumors for the same model. VAC: Vincristine/actinomycin-D/cyclophosphamide;
7 EFS: event-free survival.
