

**Supplementary Materials for  
Feasibility of circulating tumor DNA analysis in dogs with naturally-occurring malignant and  
benign splenic lesions**

Healthy dog	cfDNA concentration (pg per ml of plasma)	Modal cfDNA fragment size (base pairs)	cfDNA WGS coverage
1	247.5	163	0.46
2	375.5	166	0.83
3	238.0	171	0.39
4	143.9	164	0.48
5	260.6	167	0.45
6	1448.9	165	0.30
7	310.7	153	0.33
8	151.2	171	0.45
9	349.5	170	0.42

**Table S1.** Description of cell free DNA concentration per mL of plasma and the respective modal fragment size and whole genome sequencing (WGS) coverage from the plasma of nine healthy dogs.

Patient	Gender	Breed	Age (years)	BW (kg)	Diagnosis	Survival (dps)	Pre-operative cfDNA conc.	First post-operative cfDNA conc.	Pre-operative ctDNA fraction	First post-operative ctDNA fraction	TF tumor biopsy	MT

**Table S2.** Description of the patients included in the baseline peri-operative cohort, with the respective diagnostic, cell-free DNA concentrations and tumor fractions. M = male intact; Ms = male sterilized; Fs = female sterilized; dps = days post-surgery; na = not applicable; cfDNA conc = cell-free DNA concentration (ng) per mL of plasma; TF cfDNA = tumor fraction in plasma cell free DNA; TF tumor biopsy = ichor tumor fraction in tissue tumor biopsy; BW = bodyweight (Kg) at the time of surgery; MT = metastasis identified during peri-operative period; Benign A = Benign Complex Nodular Hyperplasia; Benign B= Myelolipoma; Benign C = Benign Complex Hyperplasia and Hematoma; \* = last day seen; \*\* = alive at last day of study.
