\$10 Figure: Comparing summary statistics for the KLKB1 locus from OPN GWAS (unconditional statistics, A) and the UK Biobank phenotype deep venous thrombosis (DVT, conditional statistics, B).

## (A) OPN GWAS results for KLKB1 locus in GCKD study

(B) DVT GWAS results for KLKB1 locus in UK Biobank after

In conditional analysis, two independent SNPs for the KLKB1 region were identified for the trait DVT in UK Biobank: 1) rs4253399 and 2) rs1593. Using summary statistics adjusted for rs4253399 of DVT (UK Biobank, B), colocalization with OPN GWAS signal (A) was observed (H4: p12=0.96).
