**Supplementary:** 4 figures and 2 tables

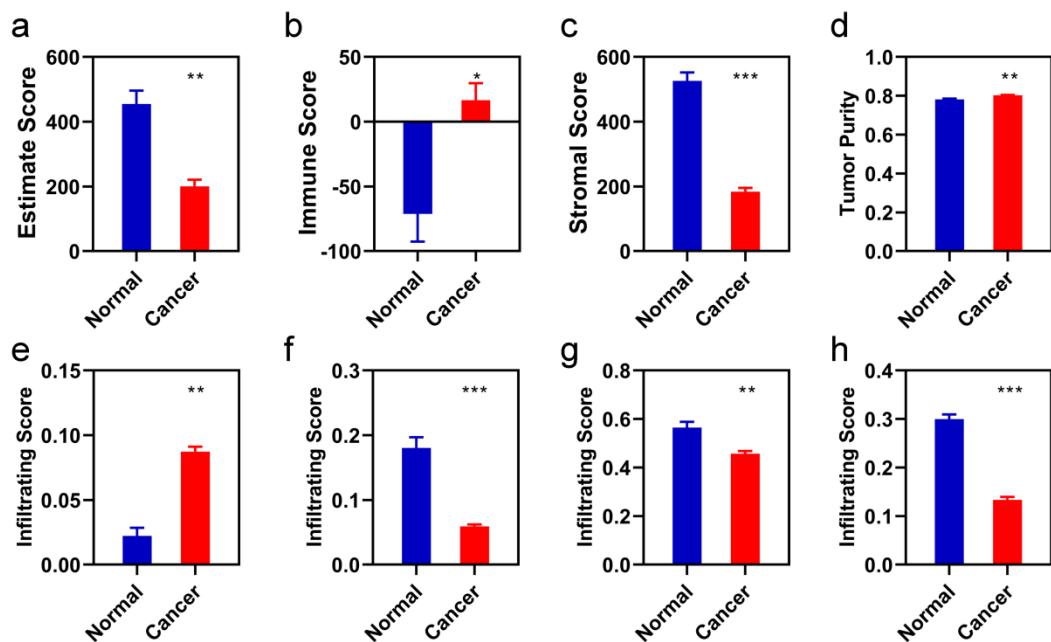

**Supplementary Figure 1** The Youden index as the optimal cut-off value

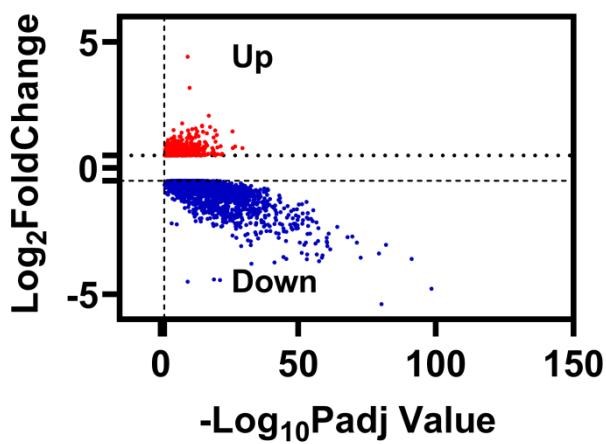

**Supplementary Figure 2** Independent prognostic values of those 4 FI-DEls in training group and validation group.

**a, d,** Univariate Cox regression analyses illustrated four clinical characteristics and risk assessment model were correlated with OS of patients. a, for training group. d, for validation group. **b, e,** Multivariate Cox regression analyses illustrated three clinical characteristics and risk assessment model were correlated with the OS of patients independently. b, for training group. c, for validation group. **c, f** ROC curve of different clinical characteristics and risk assessment model. c, for training group. f, for validation group.

**Supplementary Figure 3 Correlation analyses of risk assessment model with the immunity.**

**a-d,** Comparison of the estimate score (a), immune score (b), stromal score (c), and tumor purity (d) between normal and cancer. **e-h,** Comparison of the infiltrating score between normal and cancer. e, B cell. f, Macrophage. g, Myeloid dendritic cell. h, T cell CD8<sup>+</sup>. \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001.

**Supplementary Figure 4** Volcano plot of DEGs between the patients with different risk score.

**Supplementary table 1** Significantly enriched GO term
