Supplementary figure1:

Supplementary figure1: (A) Genital swabs were taken from HSV-2 333 infected OPTN $^{+/+}$ and OPTN $^{-/-}$ animals at 5 day post infection (B) Temperature check was performed on both mock infected and HSV-2 infected groups with digital thermometer at the anal periphery from day 0 to day 10 post infection. Data represent three independent experiments with similar results, n=3-5 samples/group/genotype/condition. Error bar represent means \pm SEM. Significance was determined by two-way ANOVA with Šídák's multiple comparisons test. *p < 0.05; **p < 0.01; ***p < 0.001, ****p < 0.0001, ns, not significant.

Supplementary figure2:

Supplementary figure 2: Inflammation antibody array profile of mouse inflammatory proteins in vaginal tissue of OPTN +/+ and OPTN-/- animals infected with 1×10^6 PFU HSV-2 333 strain for 24h. Numbers indicate the position of controls and selective cytokines on array; 1and 7 - Positive control, 2-Eotaxin, 3-IL-1- β , 4-Lix, 5-MIP-1-gamma, 6-CCL5.
