

Distressed Democrats and Relaxed Republicans? Partisanship and Mental Health During the COVID-19 Pandemic: SI-Appendix *

Sean Bock *Harvard University*
Landon Schnabel *Cornell University*

This is the appendix to the article entitled ‘Distressed Democrats and Relaxed Republicans? Partisanship and Mental Health During the COVID-19 Pandemic’. We provide additional information on our data, variables, and modeling, as well as supplemental analyses.

Table S1: Weighted descriptive statistics across three waves
of the NORC COVID-19 Response Survey

Variable	Wave 1: (5/21/20 - 5/29/20)			Wave 2: (6/22/20 - 7/6/20)			Wave 3: (7/22/20 - 8/10/20)		
	N	Mean	SD	N	Mean	SD	N	Mean	SD
Party I.D.	2271			2006			2002		
... Democrat	1064	47%		942	48%		950	49%	
... Independent	351	16%		301	16%		310	16%	
... Republican	856	37%		763	36%		742	35%	
General unhappiness	2263			2007			1996		
... Not too happy	325	14%		287	14%		286	14%	
... Pretty happy	1422	63%		1239	62%		1222	61%

Variables

Table S2: Description of distress variables

Variable	Question	Measurement
Emotional problems	'In the past seven days, how often have you been bothered by emotional problems such as feeling anxious, depressed or irritable?'	1 = 'Never', 5 = 'Always'
Fatigue	'In the past seven days, how would you rate your fatigue on average?'	1 = 'None', 5 = 'Very severe'
Mental health	'In general, how would you rate your mental health, including your mood and your ability to think?'	1 = 'Poor', 5 = 'Excellent'

Table S2: Description of distress variables (*continued*)

Variable	Question	Measurement
General unhappiness	'Taken all together, how would you say things are these days—would you say that you are very happy, pretty happy, or not too happy?'	1 = 'Very happy', '2 = 'Not too happy'
Quality of life	'In general, would you say your quality of life is...	1 = 'Excellent', 5 = 'Poor'
Covid reaction scale	'Please indicate whether or not each of the following have happened to you since the outbreak of the coronavirus/COVID-19 pandemic... ' [Didn't feel like eating] [Smoked more than usual] [Had headaches] [Had an upset stomach] [Cried] [Had trouble getting to sleep] [Felt very nervous and tense] [Felt like getting drunk] [Felt more tired than usual] [Felt dizzy at times] [Lost my temper more than usual] [Hands sweat and felt damp and clammy] [Had rapid heart beats] [Felt sort of dazed and numb] [Kept forgetting things]	0 = 'No', 1 = 'Yes' (Scale created from sum of responses)

Table S2: Description of distress variables (*continued*)

Variable	Question	Measurement
Feel scale	'During the past few weeks did you ever feel...' [Particularly excited or interested in something] [So restless that you couldn't sit long in a chair] [Proud because someone complicated you on something you had done] [Very lonely or remote from other people] [Pleased about having accomplished something] [Bored] [On top of the world] [Depressed or very unhappy] [That things were going your way] [Upset because someone criticized you]	0 = 'No', 1 = 'Yes' (Scale created from sum of responses)
Loneliness scale	'How often in the past 4 weeks have you felt that you lack companionship?', 'How often in the past 4 weeks have you felt that you are isolated from others?', 'How often in the past 4 weeks have you felt that you are left out?'	1 = 'Never', 5 = Very often' (Scale created from sum of responses)

Table S2: Description of distress variables (*continued*)

Variable	Question	Measurement
Stress scale	'In the past 4 weeks, how often have you felt that you were unable to control the important things in your life?', 'In the past 4 weeks, how often have you felt confident about your ability to handle your personal problems?', 'In the past 4 weeks, how often have you felt that things were going your way?'	1 = 'Never', 5 = Very often' (Scale created from sum of responses)

Table S3: Description of independent variables

Variable	Measurement
Party Identification	1 = 'Democrat', 2 = 'Independent', 3 = 'Republican'
Education	1 = High school or less, 2 = Some college, 3 = BA or more
Income	1 = Less than \$50,000, 2 = \$50,000 to under \$100,000, 3 = \$100,000 or more
Employment status	0 = 'Not employed', 1 = 'Employed'
Marital status	0 = 'Not married', 1 = 'Married/co-habiting'
Race/ethnicity	1 = White, 2 = Black, 3 = Hispanic, 4 = Other
Geographic region	1 = Northeast, 2 = Midwest, 3 = South, 4 = West
Age	18-29, 30-39, 40-59, 60-64, 65 or older
COVID-19 info: 'How much are you watching, reading, or talking about the coronavirus/COVID-19?'	1 = 'Never', 5 = 'Most of the time'

Table S3: Description of independent variables (*continued*)

Variable	Measurement
COVID-19 hotspot: R lived in area with high COVID-19 infection and death rates at time of interview	0 = 'Not a hotspot', 1 = 'Hotspot'
COVID-19 exposure: 'During the past month, have you been exposed to someone likely to have the coronavirus/COVID-19?'	'0 = 'No', 1 = 'Yes'
COVID-19 family diagnosis: 'During hte past month, has anyone in your family been diagnosed with the coronavirus/COVID-19?'	0 = 'No', 1 = 'Yes'
COVID-19 family impact scale: 'During the past month, have any of the following happened to your family members because of the coronavirus/COVID-19?' [Lost or been laid off from job] [Reduced ability to earn money] [Passed away]	0 = 'No', 1 = 'Yes' (Scale created from sum of responses)
COVID-19 economic impact: 'In what ways, if any, has the coronavirus affected your job, income, or finances: You lost income due to a workplace closure or reduced hours'	0 = 'No', 1 = 'Yes'

Supplementary figures

Counterfactual unhappiness gap trends

Figure 2 displays the partisan gap in unhappiness over time, including a counterfactual scenario. The red line indicates what the gap would have been in 2020 if Black Democrats experienced the same level of distress as White Democrats. The counterfactual highlights the impact of the relatively low increase in distress among Black Democrats in 2020 on the partisan unhappiness gap.

GSS 2016-2020 Panel

The GSS released the 2020 companion data to the 2016 and 2018 panel waves in May of 2021. Respondents were matched from either the 2016 and 2018 waves in 2020, but no respondents were interviewed in all three waves. 2020 interviews were conducted in September of 2020, meaning that these data were collected at least one month after the last wave of the NORC COVID-19 Response Survey data. Figures 3 and 4 plot partisan trends for two samples. Figure 3 shows overall trends of unhappiness with combined samples. Figure 4 plots unhappiness trends, limited to respondents that maintained the same partisan I.D. between their respective first and second interviews. Figure 4 allows us to control for the potential of party I.D. switching affecting partisan trends in unhappiness. The results provide additional evidence of increased distress during the pandemic for all respondents. Further, these results provide some evidence that the partisan gap may have increased at later points in 2020 (compared to trends seen in the NORC COVID-19 Response Survey data). Given small sample sizes—especially once broken down into sub-party groups for those who held consistent party I.D.s—we are hesitant to draw any strong conclusions about within-party trends.

Note: Points indicate mean response by group. Higher values = greater distress. Dashed line indicates beginning of pandemic. 'White' includes non-hispanic whites only.
