

	Example 1	Example 2	Localization
DP1 phage			control
DP1 phage treated with control serum			control
DP1 phage treated with serum specific to gp22			head
DP1 phage treated with serum specific to gp29			tail

**SUPPLEMENTARY FIG. S3.** Localization of proteins gp22, and gp29 in DP1 phage virions, exemplary TEM images. Proteins were visualized by binding to by gold nanoparticles (5 nm).
