

Figure Legends

Figure S1 Heatmap of accessory genes in 232 *K. pneumoniae* isolates.

Squares beside isolates represent the isolation sources and STs. Squares listed on the right represent clusters of orthologous groups (COG).

Figure S2 Heatmap of resistance genes in 232 *K. pneumoniae* isolates.

Squares beside the isolates represent isolation sources and STs. Squares listed on the right represent antibiotic-related resistance genes.

Figure S3 Heatmap of plasmid replicons in 232 *K. pneumoniae* isolates.

Squares beside the isolates represent isolation sources and STs. Squares listed on the right represent plasmid replicons.

Figure S4 Heatmap of virulence genes in 232 *K. pneumoniae* isolates.

Squares beside the isolates represent isolation sources and STs. Squares listed on the right represent virulence genes.
