

Supplementary information, Fig. S22 | Structural comparison of six Nup155 molecules from the IR subunit.

a, Structures of the three Nup155 molecules on the cytoplasmic side are nearly identical with those on the nuclear side. **b**, Nup155-2 and Nup155-3 on the cytoplasmic side show distinct conformations. **c**, Structural differences between Nup155-2' and Nup155-3'. Similar to the comparison between Nup155-2 and Nup155-3, their counterparts on the nuclear side also display different local conformations.
