

Fig. S11. Hv1 currents in DRG neurons from SNI mice. **a** typical whole-cell current traces and **b** current–voltage (I–V) relationships for Zn^{2+} sensitive current under SNI mice and sham mice ($n = 6$ cells from 6 mice for SNI group, $n = 8$ cells from 8 mice for Sham group, two-way repeated measures ANOVA). Data in **(b)** are shown as mean \pm SEM. ****** $P < 0.01$.
