

Figure S1. Representative immunofluorescence staining with DAPI. Representative confocal image of immunofluorescence double staining of TIM-3 with CD8 (magnification, x40) merged with DAPI.

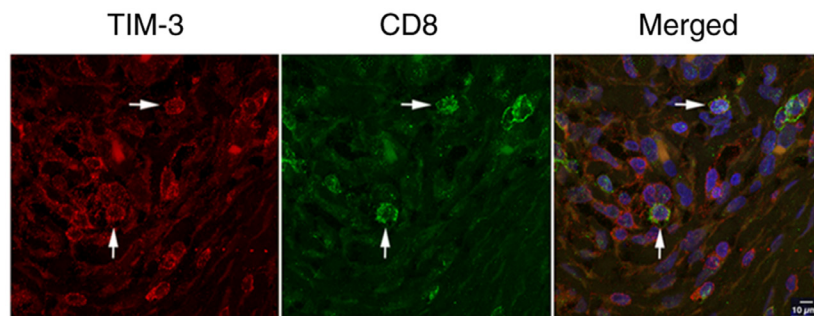

Figure S2. OX40 and TIM-3 expression stratified by median progression-free and overall survival. (A) OX40 and (B) TIM-3 expression (number of positive cells per field) stratified according to median progression-free survival from immunohistochemical analysis of 29 patients with HGSOC. (C) OX40 and (D) TIM-3 expression (number of positive cells per field) stratified according to median overall survival from immunohistochemical analysis of 29 HGSOC patients. (E) OX40 and (F) TIM-3 transcript expression ($-\log_{10}$) stratified according to median progression-free survival from the ovarian cancer TCGA cohort. (G) OX40 and (H) TIM-3 mRNA expression ($-\log_{10}$) stratified according to median overall survival from TCGA ovarian cancer cohort. NS, not significant; TCGA, The Cancer Genome Atlas.
