S1. EQUATIONS

Space velocity, SV :

$$SV = \frac{Q}{BV} \quad (\text{eq S1})$$

where Q is the volumetric flow rate (mL h^{-1}) and BV is the bed volume (mL), regarded as the total volume of the SILP together with the void volume in the column.

Table S1 Separation factors between REEs and Sc(III) from equimolar solutions at $\text{pH}_{\text{eq}} \approx 2.6$ in the batch experiments.

	Y(III)/Sc(III)	Nd(III)/Sc(III)	Dy(III)/Sc(III)
Nitrate media	1.3	1.2	1.1
Sulfate media	4.2	3.4	3.6

Table S2 Separation factors between REEs at $\text{pH}_{\text{eq}} \approx 2.6$ in the batch mode.

	Y(III)/Nd(III)	Dy(III)/Nd(III)	Y(III)/Dy(III)
Nitrate media	1.1	1.3*	1.5
Sulfate media	1.2	1.1	1.2

*The value represents the Nd(III)/Dy(III) separation factor.

Table S3 Summary of bed volumes (BV) and adsorption capacities $q_{0.05}$ and q at breakthrough and exhaustive point, respectively: a) nitrate feed at 0.5 mL min^{-1} ($SV = 2.7 \text{ h}^{-1}$), b) nitrate feed at 2.0 mL min^{-1} ($SV = 10.8 \text{ h}^{-1}$) and c) sulfate feed at 0.5 mL min^{-1} ($SV = 2.7 \text{ h}^{-1}$).

	BV (mL) at $c/c_0 = 0.05$			BV (mL) at $c/c_0 = 1$			$q_{0.05}$ (mmol g $^{-1}$)			q (mmol g $^{-1}$)			$q_{0.05}/q$
