

Supplementary figure 1

Supplementary figure 1. Berberine fails to induce apoptosis of TNBC cells. (A)

Cell apoptosis profiles of MDA-MB-231, MDA-MB-468 cells treated with berberine for 72 h. Annexin V/PI double staining assay was performed by flow cytometry to detect the percentage of apoptotic cells. (B) The percentage of apoptosis was obtained for MDA-MB-231, MDA-MB-468 cells, and data analyses were performed by GraphPad Prism 8 Software.
