

Supplementary Figure 1:

Inhibition curve (neutralization activity) of patient serum samples against SARS-CoV-2 Spikedelta21-D614G pseudotyped lentiviral particles with Luciferase-IReS-ZsGreen backbone (gifts from Dr. Jesse Bloom). The Fraction infectivity of each dilution point is calculated by % reduction of RLU (relative light units) compare to the negative controls. SPSS program was used to calculate the IC50 (Half-maximal inhibitory concentration) and IC80 (80% inhibitory concentration). ND50 (50% neutralization dilution) and ND80 (80% neutralization dilution) were calculated as the reciprocal of IC50 and IC80.

Subject inhibition curves depicted by Visit number: Visit 1 (prevaccine), Visit 2 (1 month after 1st vaccine), Visit 3 (3 months after 1st vaccine), Visit 4 (6 months after 1st vaccine).
