

Figure S1. Box plots showing results of leukocytes subset indices from Table 2. **(a)** NLR (neutrophil/lymphocyte ratio), **(b)** PLR (platelet/lymphocyte ratio), **(c)** LMR (lymphocyte/monocyte ratio), **(d)** SII (neutrophil x platelet/lymphocyte ratio), **(e)** SIRI (neutrophil x monocyte/lymphocyte ratio), **(f)** AISI (neutrophil x monocyte x platelet/lymphocyte ratio). Healthy Control (HC), Simple Silicosis (SS) and Progressive Massive Fibrosis (PMF) Boxes show interquartile ranges. Lines in the boxes correspond to medians, and bars represent the lowest and highest values. *p* values with significant differences between groups are indicated by horizontal lines.
