

Supplementary Material

Supplementary Figure 1. Results of sample phase of Novel object recognition test

(A) Exploration time (s) rats spent at two identical objects named Object 1 and Object 2. (B) Number of approaches to Object 1 and Object 2. No statistical difference was observed in all examined group in both exploration time and number of approaches. Results of *post hoc* Tukey's test and significance shown inside graphs, * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$, **** $p < 0.0001$, ns- no significance.
