

Supplementary information, Figure S6

Supplementary information, Figure S6. VEGF-C is closely correlated with anti-tumor immunity in RT from the Gene Expression Omnibus. a–d, Correlation of the expression (transcripts per million; TPM) of VEGF-C and the T cell marker CD3E (a), the CD8⁺ T cell marker CD8A (b), and the Treg markers CD4 (c) and Foxp3 (d) in glioma patients treated with RT (data from GSE42669 of the Gene Expression Omnibus database; n = 47). P values are Pearson's correlations.
