

Supplementary information, Figure S8

Supplementary information, Figure S8. T cell population after CCL21 blockade.

a–b, Representative flow cytometry plots of CD8⁺ T cells (a), and CD4⁺ T cells (b) in CLNs (left) and quantification (right) in tumors and CLNs from IgG isotype or anti-CCL21 groups as percentages of overall CD45⁺ cells on day 22 after inoculation (n = 8). Data are presented as means ± SEM. Student's t test (a–b). Data are from at least three (a–b) independent experiments.
