Supplemental Figure. Factors associated with use of traditional medicine: multivariable logistic regression, n=1971

Determinant of TM use			OR (95% CI)	p-value
Age (5 year increase)	- - -		1.03 (0.98, 1.08)	0.26
Male sex (vs. female)			1.36 (1.08, 1.70)	0.01
Reported missing treatment because too expensive (vs. no)			1.60 (1.24, 2.06)	<0.001
Poor treatment adherence (vs. high)			2.08 (1.63, 2.65)	<0.001
Any complication of hypertension (vs. none)			1.28 (1.01, 1.62)	0.04
Controlled hypertension (reference)	•		1.00 (1.00, 1.00)	
Mild hypertension			1.20 (0.88, 1.64)	0.24
Moderate hypertension	_		1 .11 (0.80, 1.53)	0.54
Severe hypertension	•		1.36 (0.98, 1.90)	0.07
	1 1.5	2	2.5	

Estimates are mutually adjusted in one single multivariable model with random effect for country.
